CORPORATE PROFITS

This article is concerned with tracing the course of corporate profits through the post-war period against the background of long-term trends in the relationship of corporate profits to National Income, in the industrial pattern of corporate profits and in the disposition of profits as taxes, dividends and retained earnings.

Long-Term Trends in Corporate Profits

Over the long-term, corporate profits as measured in the National Accounts,[1] i.e., before taxes and after dividends paid abroad, have become a larger share of the National Income.[2] Whereas in 1928 corporate profits accounted for only about 9 per cent of the National Income, by 1956 the share had risen to about 12 per cent. In the same period the share of labour income has grown from about 57 per cent of the National Income to about 64 per cent. As a concomitant, the share of unincorporated business, both farm and non-farm, has fallen sharply. These changes reflect the growing industrialization of the economy and the rise in the relative importance of such industries as manufacturing where the corporation is the typical form of organization. Apart from structural changes, there may also have been a growing tendency to adopt the corporate in preference to other forms of organization.

The industrial pattern of corporate profits[3] is shown for selected years in the accompanying table. The salient features of the long-term changes are the increased relative importance of manufacturing, trade and construction and the diminished relative importance of the other industrial groups. The years shown on the table have been selected to reveal the pronounced cyclical and war-time changes in the industrial composition of corporate profits.

Corporate profits in manufacturing have shown some tendency to gain in relative importance in the period of time considered here. Manufacturing accounted for about 49 per cent of the total in 1956, compared with about 46 per cent in 1928. Corporate profits in manufacturing are extremely sensitive cyclically, as is evidenced by the sharp decline in the relatively mild recessions of 1953-1954 and 1957-1958.

The two trade groups have grown considerably in relative importance in the period considered here. In 1928, they accounted for 11.5 per cent of total profits and in 1956 for more than 15 per cent, this result being the outcome of a substantial gain in wholesale trade, partially offset by a decline in retail trade. In spite of the generally high and rising level of consumer expenditure in the post-war period, profits in retail trade have shown wide fluctuations.

During the post-war period expenditures on construction have been considerably higher in relation to Gross National Product than in the prosperous years of the late twenties. Accordingly, corporate profits in the construction industry have come to occupy a considerably more important place in the profits picture than was the case three decades earlier. In 1956, construction accounted for more than 3 per cent of total profits, in contrast to less than 1 per cent in 1928.

In 1956 corporate profits originating in mining, quarrying and oil wells accounted for somewhat more than 11 per cent of the total, much the same proportion as in 1928. In the decade following the First World War, as in that following the Second World War, exploration and development of Canada's mineral resources were carried on actively, thus paving the way for further expansion of production when markets for metals and minerals began to recover from the depression. The revaluation of gold after 1932 greatly stimulated development in this segment of the industry. In these circumstances, corporate profits in mining, quarrying and oil wells fell much less sharply than total profits during the depression and recovered considerably earlier. By 1934 they had returned to the level of 1929. Thus in the depressed thirties, they represented a much higher proportion of total corporate profits than is characteristic of periods of prosperity.

Corporate profits in the group transportation, storage, communication and electric power, gas and water utilities, the components of which are not estimated separately for the early years of the period, represented about 9 per cent of total corporate profits in 1956, compared with nearly 15 per cent in 1928. The estimates for the individual components, available after 1943, show that the cyclical swings in profits are pronounced in transportation.

---

[1] For a detailed discussion of the concept of corporate profits in National Income accounting, see "National Accounts, Income and Expenditure, 1926-1956", page 114; sources and methods of estimation are described in the same document, page 143. Corporate financial statistics are published in "Selected Corporation Financial Statistics, 1926-1946", a working document prepared in the Research and Development Division of D.B.S., available on request, and in "Taxation Statistics", from 1944 on, prepared by the Department of National Revenue. Quarterly estimates of corporation profits and other financial data, from 1950 on, are published in the D.B.S. bulletin, "Corporation Profits".

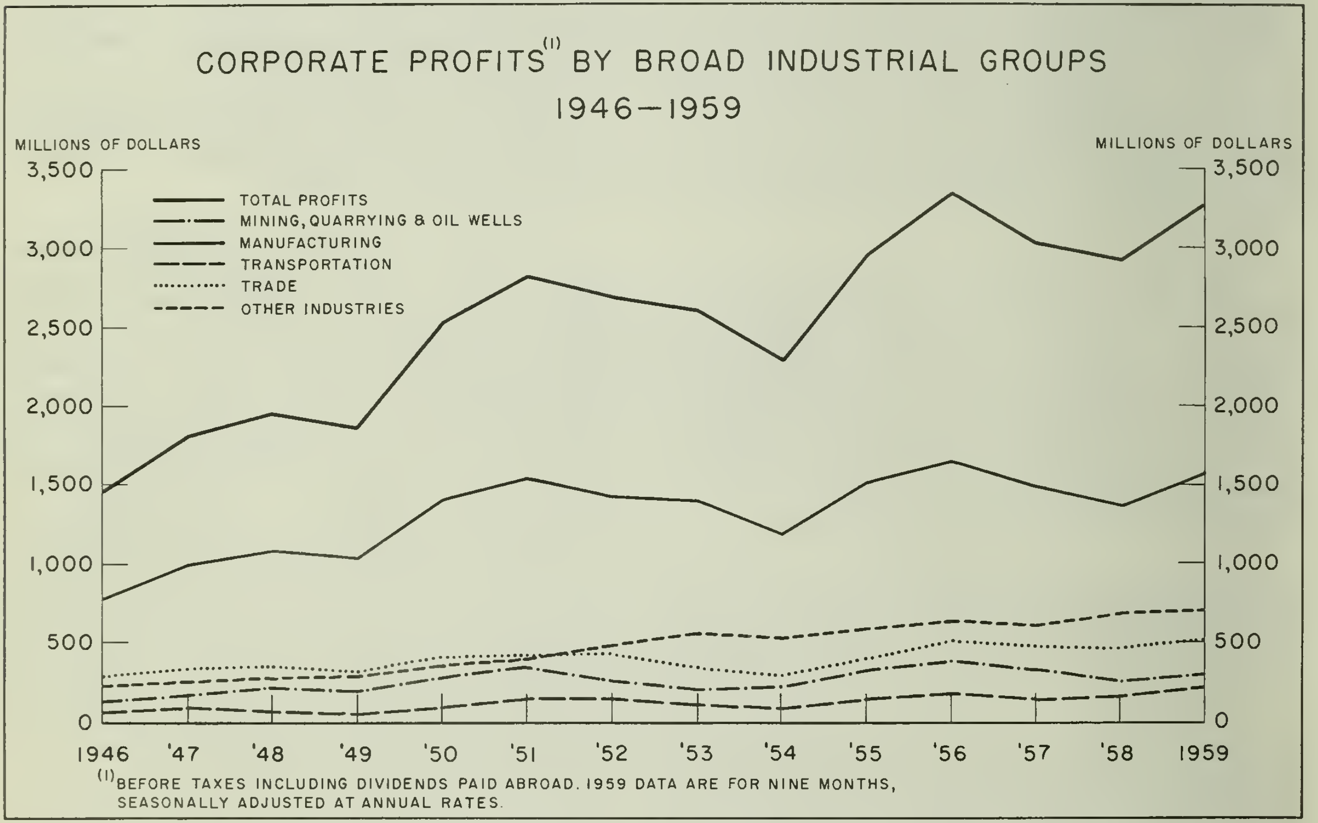
[2] In long-term comparisons, 1928 is compared with 1956, since both were prosperous years and 1928 was free from the unusual features that characterized 1929.

[3] For this purpose, corporate profits are measured inclusive of dividends paid abroad.

Corporate Profits by Industry as a Percentage of Total – Selected Years

	1928	1931	1939	1943	1946	1949	1951	1954	1956	1958
Mining, quarrying and oil wells	11.7	22.1	23.1	11.9	9.0	10.2	12.1	9.7	11.4	8.8
Manufacturing	45.6	38.0	47.4	50.8	52.2	55.2	54.4	51.8	49.2	46.4
Construction	0.7	0.6	0.4	0.7	0.9	2.3	1.6	3.9	3.2	5.2
Transportation, communication, storage and public utilities	14.8	11.7	6.6	14.3	8.8	6.0	8.7	7.9	8.9	9.8
Wholesale and retail trade	11.5	-1.2	9.1	13.9	19.7	16.6	14.6	12.3	15.2	16.0
Finance, insurance, real estate and service	15.3	28.2	13.0	8.1	8.9	9.1	7.9	13.8	11.6	13.8
All other industries	0.4	0.6	0.4	0.3	0.5	0.6	0.7	0.6	0.5	–
Total corporate profits	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

The finance, insurance and real estate group has lost significantly in relative importance, falling from 13 per cent of total corporate profits in 1928 to 9 per cent in 1956. Profits in this group tend to show a high degree of stability. Service industries have continued to account for about the same small proportion as in the past.



CORPORATE PROFITS[(1)] BY BROAD INDUSTRIAL GROUPS
1946–1959

(1) BEFORE TAXES INCLUDING DIVIDENDS PAID ABROAD. 1959 DATA ARE FOR NINE MONTHS, SEASONALLY ADJUSTED AT ANNUAL RATES.

Largely as a result of changes in the techniques of public finance, the disposition of corporate profits is now radically different from what it was in the twenties. The exigencies of war-time financing led to the introduction of taxes on corporate and personal incomes in 1917. With the passage of time these two types of taxes became key elements in the structure of government revenue, thus diminishing the previous heavy dependence on indirect taxes. By 1956, the corporate income tax yielded more than 17 per cent of the revenues of all governments combined in contrast to less than 5 per cent in 1928.

During the early years of the period considered here, taxes absorbed about 8 per cent of total corporate profits. With the onset of the great depression, governments were faced with an acute problem of dwindling revenues and mounting expenditures for relief of need. Rates of corporate income tax were raised on several occasions by the Federal Government and the provincial governments began to tap this source of revenue. In this situation, taxes came to absorb a decidedly larger share of corporate income. In most years of the thirties, the proportion going in taxes was approximately double what it had been in the late twenties.

Following the outbreak of the Second World War, rates of corporate income tax were raised and excess profits taxes imposed, with the result that by 1943 half of corporate income was being absorbed by taxation. Rates of taxation were gradually reduced after the end of the war and by 1948 the share of taxes in corporate income had fallen to 35 per cent. However, the downward trend in tax rates was reversed as defence expenditure began to mount after the outbreak of the Korean War in mid-1950; in 1951 and 1952 taxes were again absorbing approximately half of corporate income. In recent years, the proportion has been 42 to 44 per cent.

The increase in the share of taxation has correspondingly reduced the proportion of corporate income available for distribution as dividends or for building up reserves. Thus in 1928 retained earnings represented about 50 per cent of corporate income and dividends about 40 per cent; the ratios for 1956 were 34 per cent and 23 per cent respectively. For a variety ot reasons corporations prefer to follow a stable dividend policy, even dipping into reserves when necessary, with the result that the fluctuations in corporate income are mainly reflected in undistributed earnings. Thus the share of dividends in corporate profits tends to be relatively high in recessionary periods and the share of undistributed profits relatively low.

During the late twenties, dividends paid to Canadian residents and dividends paid to non-residents were about the same, both receiving about 20 to 22 per cent of total profits. This relationship was sharply altered during the depressed thirties when the share of non-residents became much larger. There was a decided narrowing of the difference during the war years.

In the post-war period, as in previous periods of rapid economic development in Canada, a high level of investment involved massive imports of capital. While non-resident ownership of Canadian industry and commerce was a somewhat smaller proportion of the total in 1956 than in 1926, a much larger proportion of the total was controlled by non-residents than in the earlier period. Moreover, non-resident ownership and control has increasingly been concentrated in the more dynamic sectors ot the economy. In recent years, dividends paid to non-residents have tended to rise relative to dividends paid to residents, the proportions paid out in 1956 being 13 and 10 per cent respectively.

Recent Trends in Corporate Profits

The post-war rise in profits,[1] briefly interrupted in 1949, was resumed at an accelerating rate in the two following years, particularly after the upsurge in activity and prices following the outbreak of the Korean War in mid-1950. The period 1952 to 1954 was one of declining profits but the vigorous recovery of the two following years raised profits to their post-war peak of $3,345 million in 1956.[2] Profits fell sharply in 1957, but the downward trend was reversed in the second half of 1958; in the closing quarter they were running at a seasonally adjusted annual rate of $3,348 million, remaining at about this level through the first three quarters of 1959, well above the recessionary low of $2,700 million in the second quarter of 1958.

The accompanying charts, showing the quarterly movements in non-farm Gross National Product and total corporate profits and in the index of industrial production and profits in the industries covered by the index, demonstrate the amplitude of the swings in corporate profits in relation to the variations of two important economic aggregates. The data cover a short period of time but they do suggest that the movements in corporate profits tend to anticipate movements in the index of industrial production and that profits per unit of output have narrowed in the period 1950-1959.

The cyclical pattern of corporate profits in the post-war period has been dominated by three industries – manufacturing, trade and mining. This dominance reflects the size of the manufacturing and trade groups and their sensitivity to cyclical changes in economic activity and the special position of the mining industry, which has shown wide fluctuations in profits in a situation of large scale and rapid development. Profits in transportation are also extremely variable but they represent only a small proportion of the total. Profits in other industries, considered as a group, have shown only minor fluctuations super-imposed on a particularly strong growth trend.

---

[1] Canadian statistics do not allocate the inventory valuation adjustment, i.e., the difference between the value of the physical change in inventories and the change in book value, between incorporated and unincorporated enterprise, but National Income is adjusted to remove these unrealized gains or losses arising from the effect of price changes on inventories. This adjustment was negative in most of the post-war period and particularly large in 1951.

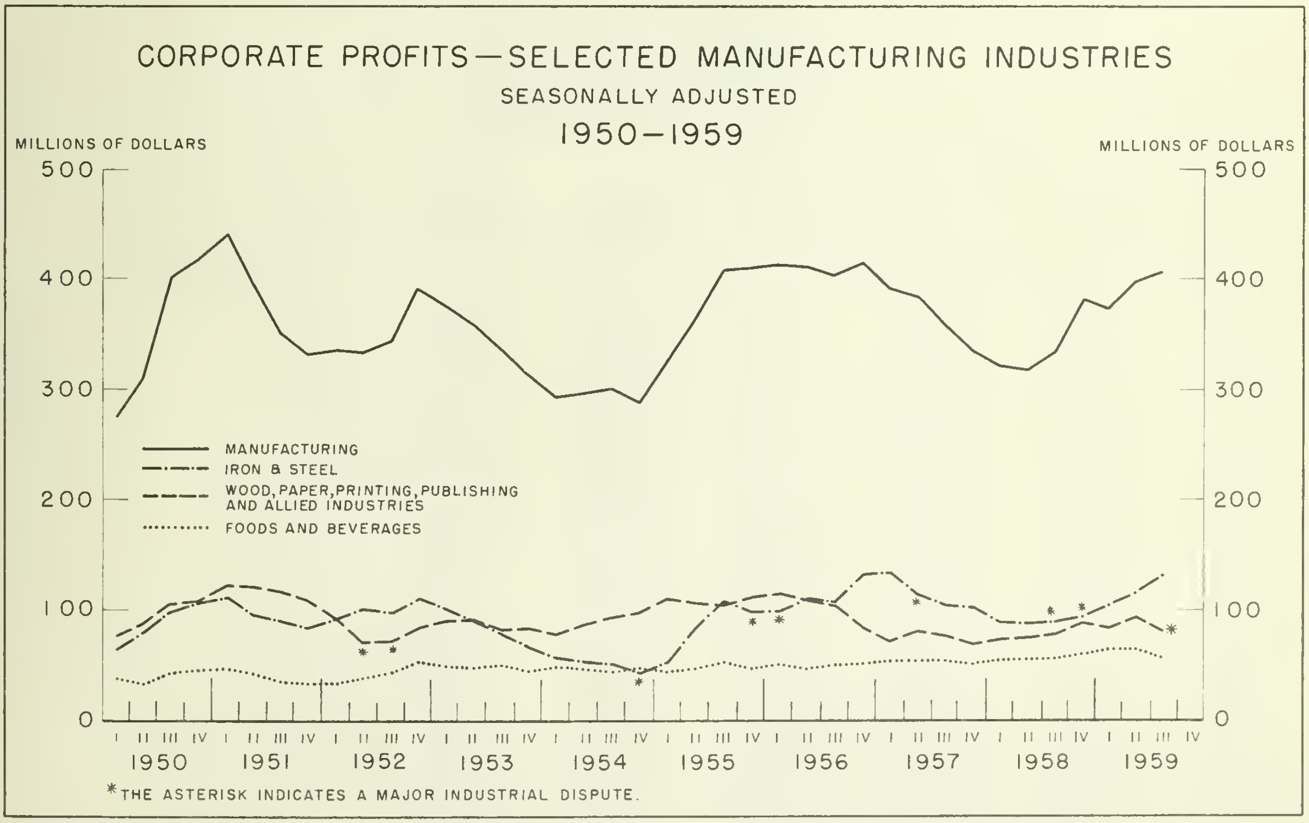
[1] CORPORATE PROFITS IN MINING, MANUFACTURING AND PUBLIC UTILITIES, INCLUDING DIVIDENDS PAID ABROAD

Corporate profits in mining, quarrying and oil wells reached a post-war peak of $382 million in 1956, compared with $132 million in 1946 and a war-time peak of $187 million in 1941. The post-war fluctuations have been very wide – from $341 million in 1951 down to $207 million in 1953 and from $382 million in 1956 to $259 million in 1958. Running at an annual rate of $297 million in the first three quarters of 1959, they had made only a modest degree of recovery. The rate in the third quarter of 1959, $312 million was about the same as in the closing quarter of 1958.

It is interesting to note that these violent fluctuations in profits in the mining industry took place for the most part in a situation of vigorously expanding production. The index of mining production rose from year to year throughout the post-war period until 1958 when it stood at 228.5 (1949 = 100) compared with 74.3 in 1946. At the same time, the composition of output was changing markedly, largely as a consequence of the development of resources of petroleum, natural gas, uranium and other new products.

Profits in manufacturing industries also reached a post-war peak in 1956 when they were $1,646 million, compared with $769 million a decade earlier. The drop in profits in manufacturing between 1951 and 1954, from $1,538 million to $1,186 million, was much smaller percentagewise than the drop in profits in mining. In manufacturing, unlike mining, the fall in profits in the 1953-1954 recession was accompanied by a decline in the physical volume of production. After the 1956 peak of $1,646 million, profits in manufacturing fell to $1,360 million in 1958. By the third quarter of 1959, the fifth successive increase had brought manufacturing profits to an annual rate of $1,624 million, thereby virtually restoring the peak levels of 1956.

Three industries are overwhelmingly important in determining the profits picture in manufacturing: wood and paper products and iron and steel, which normally account for about half the total, and foods and beverages, which accounts for more than 10 per cent. The cyclical pattern of profits in these groups and in manufacturing as a whole is shown in the accompanying chart. The precise timing of the wide fluctuations in profits in wood and paper products and in iron and steel is to some extent influenced by the incidence of industrial disputes but the underlying pattern is clear. By the third quarter of 1959, profits in iron and steel, presumably favourably affected by the strike in the United States industry, had regained their previous high. At the same time, profits in wood and paper products were reflecting the strike in the logging and lumbering industry in British Columbia.



Profits in the trade group declined sharply in the 1953-1954 recession, falling from $424 million in 1952 to $281 million in 1954. However, the decline in the recent recession was relatively small and in the first three quarters of 1959 the annual rate of $508 million restored the level of 1956.

Profits in transportation tend to conform to the pattern of the all-industry total, but fluctuate within a much wider range. Thus the post-war peak of $177 million in 1956 was more than twice the level of 1954.

A more than three-fold increase occurred in the post-war period in the profits of the other industry divisions considered as a group, thereby raising considerably their relative importance in the all-industry total. The strong upward trend was reversed, but only slightly, in two years, 1954 and 1957. Finance, insurance and real estate accounted for about half of the $682 million profit earned in 1958, and the remainder was largely attributable to construction, service, public utilities and communications in that order. Profits in these industries continued to rise in the first three quarters of 1959.

INDUSTRIAL PRODUCTION

The index of total industrial production declined in November. The largest decline was in the durables section, reflecting a strike in the United States which created steel shortages and caused a severe cut-back in motor vehicle production.

EMPLOYMENT AND INCOME

The index of industrial composite employment declined in November. The decline can be attributed to the United States' steel strike, which reduced employment in durable manufacturing.

(2)Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

LABOUR INCOME AND FARM CASH INCOME

Labour income in November declined, reversing the generally upward trend shown earlier in the year. The decline is primarily due to the steel strike in the United States which lowered employment and consequently incomes in Canadian manufacturing.

(1) Averages of unadjusted data. (2) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month. (3) Percentage seasonally adjusted. (4) Revisions in the raw data for November, 1957 through June, 1958 are not incorporated in this series. (5) Series re-worked and therefore not comparable with previous series.

RETAIL TRADE•

Total retail trade in November declined, but the general trend over the last few months has been upward, even if the expansion of motor vehicle sales is excluded. Department store sales declined in November but the general trend during the year has been upward.

---

(1) Averages of unadjusted data. (2) Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

•The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

SELECTED GROUPS IN RETAIL TRADE

Sales of new passenger cars and sales from clothing stores declined in November. Sales of furniture, radio and appliance stores showed little change.

(2)Includes "Men's Clothing", "Family Clothing", and "Women's Clothing".

HOUSING STARTS AND COMPLETIONS

Housing starts, though down in December, were generally higher than in the stable period at mid-year. Housing completions declined in December, continuing the downward trend begun in June.

---

(1)Averages or totals of unadjusted data. (2)Seasonally adjusted at annual rates. (3)Moving average of seasonally adjusted data. (4)The M.C.D's for these series are 6, 6, 3, and 5 months respectively. For industrial and for institutional and government permits, the seasonally adjusted data are therefore smoothed by a six month moving average centered on the fourth month. The last two series are smoothed by 3 and 5 month moving averages respectively. See Table 6, footnote (1), for an explanation of the meaning of M.C.D.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

While exports declined in November, a general upward trend has prevailed throughout the year. Imports, which tended to climb in the first part, have levelled off in the latter part of the year.

(1)"De facto" population. Annual data are for June. (2)At current market prices. Annual data are totals of the four quarters. (3)Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4)All manufactured products. (5)Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

Note.— Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1)Not applicable to figures on population and immigration. (2)Yukon and North-West Territories not included in figures for births, marriages and deaths. (3)Estimates are given by years as of June 1 and by quarters for Canada. (4)Exclusive of stillbirths. (5)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926–1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

(1) The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. (2) Includes adjusting entry. (3) Includes residual error of estimate. (4) This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. **Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.**

Note: For a detailed description of concepts, sources and methods see **D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."**

(1) The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

---

*Average weekly wages and salaries.

(1)Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products. (2)Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

(1)Seasonal (formerly supplementary) benefit data included. (2)On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. (3)The number of new cases of recorded unemployment among insured persons. (4)Estimates are based on average weekly number of payments. (5)The number of calendar weeks during which a benefit payment was made. (6)Revised to relate to the Thursday nearest to the last day of the month. (7)Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957–June 1958 which included fishing claimants. **Source: Unemployment Insurance Commission and monthly reports of Unemployment Insurance Branch, D.B.S.**

(1) As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(2)The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1)These totals include all generating agencies producing over ten million kilowatt hours per year. (2)These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. (3)Less imports. (4)Total net generation less net exports. (5)Mainly the amount used in electric boilers. **Source: Monthly Report, Electric Power Statistics, D.B.S.**

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. (3)Customs exports. (4)Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(1) Shipments for further processing within own firm and for sale in Canada.

(2) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1)Includes some silvery pig iron formerly included with ferro-alloys. (2)Excluding shipments for processing. (3)Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. (4)Monthly average. (5)Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1)End of period. (2)Does not include apartment-type machines. (3)Electric and other. (4)Gas types are included. (5)In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. **Source: Monthly Reports, Domestic Electric Refrigerators, Domestic Washing Machines, Trade of Canada, and Radio and Television Receiving Sets, D.B.S.**

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. [1]Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. **Source: Building Permits, Business Finance Division. D.B.S.**

[1]The coverage was extended to 507 municipalities in 1948, and as of 1959 ,stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Planks and boards, flooring and square timber. (3)Hollow blocks including fireproofing and load-bearing tile. (4)For building insulation only. (5)Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6)Includes concrete chimney blocks. (7)Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. (1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices. Since August 1, 1958, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1)Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2)Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3)Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4)In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

Dec. 1957-32	Mar. 1958-29	June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32	June, 1959-36

(5)Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. (6)Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1) The trade figures have been adjusted to conform to balance of payments definitions of the international exchange of commodities. (2) Balance also reflects all other current transactions. (3) Net sales (+) or purchases (−) by Canadians of Canadian and foreign securities (trading, new issues and retirements.)

---

(1)Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2)As of January, 1958, statistics include the British Columbia Electric Railway. (3)As of January, 1958, the Hudson Bay Railwav has been absorbed into the Canadian National Railway system. **Source: Railway Operating Statistics, D.B.S.**

(1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of $140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. (3)Mainly deposits of foreign banks. (4)Capital, rest fund and undivided profits as at the latest fiscal year-end. (5)Including issues payable in foreign currency. (6)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (7)Excluding Canadian day to day loans. (8)Loans to grain dealers and exporters. (9)Loans to finance purchase of Canada Savings Bonds at time of issue. (10)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (11)Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

NOTE: This statement does not include any receipts other than revenues nor any disbursements other than regular budgetary expenditures. Excluded, for example, are all receipts arising from repayments of loans and advances, or from accumulations on annuity, pension and insurance funds. Similarly excluded on the expenditure side, for example, are all Govt. outlays arising from increases in loans, advances and investments.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

(1)The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. (2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries. (3) Includes Printing and Publishing and Allied Industries.

CLOTH BOUND — $5 PER COPY

This official statistical annual on the Nation's resources, institutions, and social and economic conditions is an indispensable reference volume for the teacher, student, researcher, the executive, the business and professional person, the industrial planner, and the employer.

Like its predecessors, the Canada Year Book 1959 presents a great range of up-to-date statistical information and analytical commentary on almost every phase of Canada's development.

Additional features of the Canada Year Book 1959 include special articles on the climate of Canada, postwar immigration, the mineral industry, the Fisheries Research Board, steel in Canada, and Canadian journalism since 1900.

Copies of the Canada Year Book 1959 *are available from the Superintendent of Publications, The Queen's Printer, Ottawa, and from the Information Services Division, Dominion Bureau of Statistics, Ottawa. Orders should be accompanied by postal money order or cheque made payable to the Receiver General of Canada.*

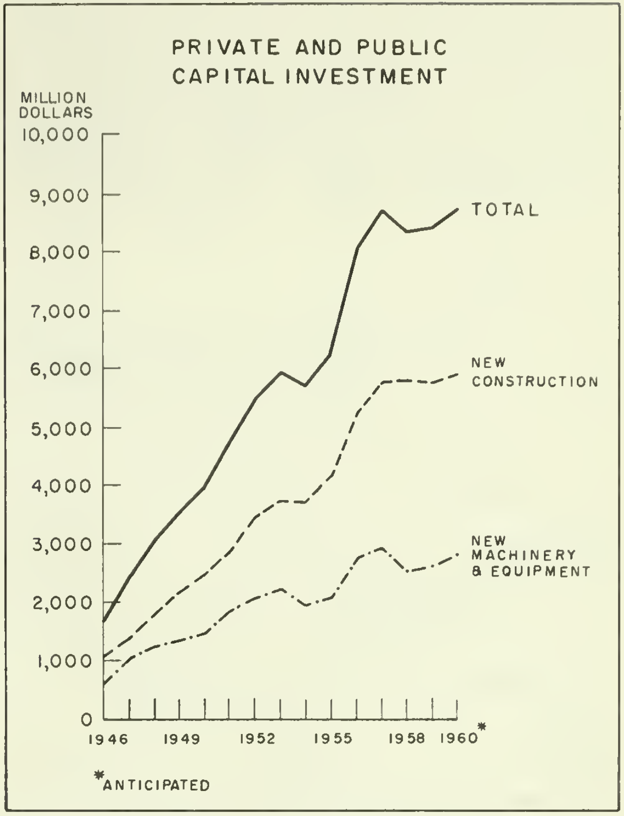
PRIVATE AND PUBLIC INVESTMENT – OUTLOOK 1960

The regular survey of anticipated capital expenditures, a joint project of the Dominion Bureau of Statistics and the Economics Branch of the Department of Trade and Commerce, was published recently in a report entitled, "Private and Public Investment—Outlook 1960". This report is based for the most part on a survey of intentions but current trends and informed opinion are used in some areas where direct surveys are difficult to make.

The results of a survey of intentions are always subject to qualifications in that plans reflect the business situation at the time of formulation and may be modified in response to new developments. During the past year markets have strengthened both at home and abroad, bringing operating levels in Canadian industry closer to capacity and creating a new interest in expansion. At the same time earnings have remained high and together with increases in depreciation allowances have added to the supply of internal funds available for new or improved facilities. Strong competing demands for funds during 1959 affected the ability to finance investment in some fields but presumably plans have taken into account the level of interest rates and other circumstances of financing. A significant change in conditions in the capital market during 1960 could lead to a revision of present plans. In the past, when economic conditions continued to be favourable investment programmes were revised upward during the course of the year and accomplishment exceeded early year intentions; this could occur in 1960. In addition, the present estimates do not provide for certain proposed expenditure for gas pipelines which await the outcome of applications now under consideration by the authorities.

CHART- I



The following table shows the trend of capital expenditure in recent years in current and constant dollars.

TABLE 1. Capital Expenditures in Current and Constant Dollars

Year	Capital Expenditures						Capital Expenditures as percentage of Gross National Product	
	Construction		Machinery and Equipment		Total			
	Current	Constant	Current	Constant	Current	Constant	Current	Constant
	millions of dollars						Per cent	
1947[1]	1,397	1,671	1,043	1,245	2,440	2,919	18.5	18.9
1948[1]	1,824	1,905	1,263	1,343	3,087	3,248	20.4	20.6
1949	2,166	2,166	1,373	1,373	3,539	3,539	21.6	21.6
1950	2,453	2,325	1,483	1,404	3,936	3,729	21.9	21.3
1951	2,871	2,405	1,868	1,562	4,739	3,967	22.4	21.4
1952	3,434	2,731	2,057	1,703	5,491	4,434	22.9	22.1

1960	5,942	—	2,828	—	8,770	—	—	—

[1] Newfoundland not included in these years.

Present plans call for total outlays of $8.8 billion, the largest on record, comparing with a previous record of $8.7 billion in 1957, and 4 per cent higher than the level reached last year. Outlays on construction are expected to be the highest ever achieved and moderately in excess of the level of the past few years. Expenditures for machinery and equipment are expected to make a significant gain over those made in 1958 and 1959 and approach the record achieved in 1957.

The moderate increase in total investment expected in 1960 involves some change in its composition. Business investment had fallen sharply in 1958 and continued to ease in 1959, with the result that the emphasis shifted to housing and social capital, which together accounted for 43 per cent of the total in 1959. With the resurgence in business investment and the expected slight decline in outlays for housing, expenditures for social capital, which are expected to rise by 1 per cent, are likely to represent 42 per cent of the programme in 1960, compared with 37 per cent in 1956.

TABLE 2. Capital Expenditures by Sectors as a Percent of Total

	1956	1957	1958	1959	1960[1]
Primary Industry[2]	13.8	12.5	10.0	11.2	11.9
Manufacturing	17.3	17.0	13.1	12.8	13.6

Institutional Services	5.0	5.2	6.1	6.3	7.1
Government Departments	12.6	12.7	13.4	15.6	15.2

[1] Anticipated.
[2] Includes agriculture and fishing, forestry, and mining, quarrying and oil wells.

Within the 6 per cent planned increase in business investment, the greatest forward impetus comes from the resource-based industries. The forest and mineral products industries are planning about a 20 per cent increase in outlays. This provides for considerably higher rates of spending for new facilities in base metal mining, the primary iron and steel industries and in the forest-based industries. Notable increases are also anticipated for commercial building, including retail outlets and office buildings. Likewise, secondary manufacturing industries expect to enlarge significantly their investment this year. On the other hand, programmes in fuel and power and transportation and communication, as planned at present, are on about the same scale as in 1959.

Primary Industry

Capital expenditures in primary industry in 1960 are expected to be $1,040 million, 10 per cent higher than in 1959, but well below the peak of $1,106 million in 1956. Higher outlays are expected for all three component groups, agriculture and fishing, mining, quarrying and oil wells, and forestry.

Capital expenditures in the mining group are expected to rise to $406 million in 1960, compared with about $345 million in the two preceding years and a peak of over $600 million in 1957. Plans for 1960 provide for new facilities in base metal mining and further large outlays for the development of the new iron ore properties in Quebec and Labrador.

Projected outlays in forestry are $63 million, about 14 per cent higher than in 1959, but below the peak of $76 million in 1956.

The Utilities

At its peak in 1957, the capital programme carried out by the utilities amounted to $2.3 billion and represented more than one quarter of the nations outlays for new facilities; as major projects for waterways, electric power and pipelines moved toward completion, capital expenditures in this sector fell sharply in the two following years. In 1960, the utilities plan to spend $1.8 billion, almost as much as in the preceding year. This virtually unchanged total mainly reflects an expansion in

(2) TOLL HIGHWAYS & BRIDGES.

outlays for telephones, for "other" utilities (which includes pipelines) and for municipal waterworks, largely offset by a curtailment of outlays by railways, electric power and some other utilities.

Capital outlays for telephones have risen in every year but one of the post-war period and are expected to continue to rise in 1960; plans call for outlays of $344 million, 9 per cent more than in the previous year. This expansion reflects technological changes in the industry as well as the growth of population in a situation of rising real income.

Outlays by "other" utilities are expected to rise to $201 million in 1960, 13 per cent higher than in 1959 but well below the peak of $372 million reached in 1958. The expenditure projected would be substantially higher if the National Energy Board approves the proposal for the export of natural gas to the United States, particularly if a favourable decision is announced fairly early in the construction season. The export of natural gas through Southern Alberta would entail heavy outlays which are not provided for in the projection set out above.

The planned increase in outlays for municipal waterworks, bringing the forecast up to $104 million compared with actual expenditures of $89 million in 1959, is associated with an expansion in the activities of the recently appointed Water Resources Board.

Capital expenditure by the railways, which have shown wide year-to-year variations are expected to fall to $314 million, 15 per cent lower than in 1959. Anticipated outlays for construction and for machinery and equipment are both down sharply. The estimate includes substantial sums for the railways to the newly developing Quebec-Labrador iron ore fields;

outlays for railway rolling stock are expected to be substantially lower than last year. This is the only major type of equipment in the whole investment programme for which lower outlays are anticipated. Outlays for electric power, though still large, are expected to be a little lower than in 1959. Plans for 1960 call for an expenditure of $601 million, which compares with a peak of $803 million in 1957.

The other groups in the utilities sector show mixed trends, with increased expenditures planned for urban transit systems and water transport and lower expenditures for gas distribution, motor transport, grain elevators and broadcasting. Outlays in water transport and services are less than half as large as in 1957 and 1958 when the St. Lawrence Seaway was absorbing massive amounts of investment.

Manufacturing Industries

The downward trend in capital outlays in manufacturing industries is expected to be reversed in 1960, bringing the total up to $1,196 million, more than 11 per cent higher than in 1959. Planned outlays for 1960 compare with a peak of $1,479 million in 1957. Much the largest part of the planned increase in outlays is in the non-durable goods industries; outlays in the durable group are expected to be only moderately higher.

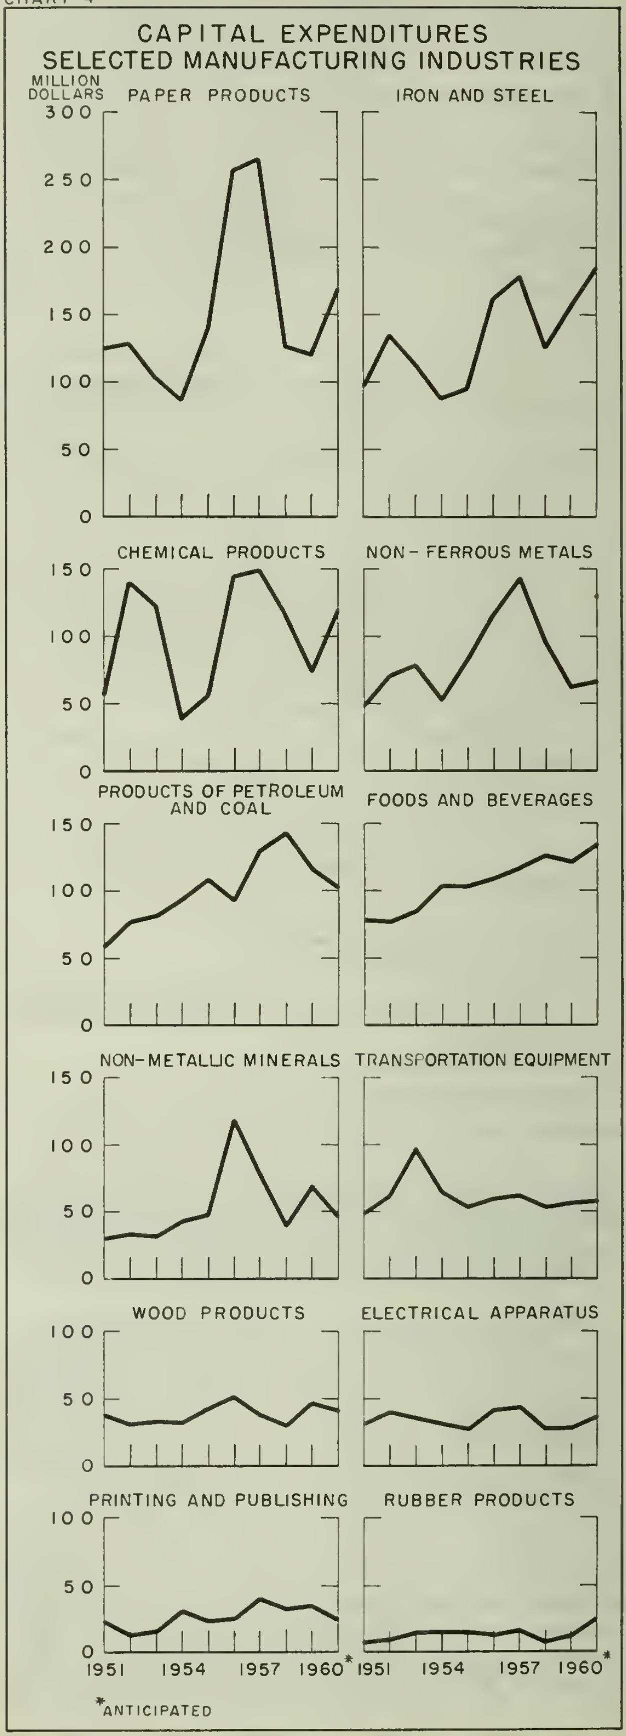
Of the major industries, the greatest increase in capital outlays is expected in paper products and chemicals. Both are groups where capital outlays have shown wide year-to-year variations. Proposed outlays of $170 million in the paper products industry, 40 per cent higher than realized in 1959, compare with a peak of $266 million in 1956. In chemicals outlays are expected to rise to $121 million, 63 per cent more than in 1959 but below the peak of $150 million so spent in 1957.

The programme in iron and steel of $186 million in 1960 continues the moderate upturn evident in capital outlays in this industry last year. A small increase in outlays is expected in electrical apparatus and supplies and in non-ferrous metals; the programme in transportation equipment is virtually unchanged.

Capital outlays in non-metallic mineral products are expected to decline sharply and projected outlays of $47 million are two-thirds those realized in 1959, and compare with a peak of $120 million in 1956. The petroleum and coal products industry also plans to curtail its outlays, as it has done in the year just past. A significant decline in outlays is expected in the wood products industry, following a substantial increase last year.

Among the non-durable groups oriented toward the domestic market, foods and beverages and rubber products plan larger outlays in 1960. Capital investment in the rubber industry is expected to double- much the highest rate of increase in any manufacturing industries. Printing, publishing and allied industries is only one of the group planning significantly lower outlays.

CHART-4



CAPITAL EXPENDITURES
SELECTED MANUFACTURING INDUSTRIES

Outlays for machinery and equipment by manufacturing industries are expected to rise by 17 per cent, thereby strengthening the demand for industrial machinery.

Trade, Financial and Commercial Services

The planned outlays for new facilities in trade, financial and commercial services for 1960 are $855 million, 13 per cent higher than actual outlays in 1959. Apart from minor interruptions, the trend of capital expenditures in this sector has been rising in the post-war period and the projected rate of increase is the largest of any post-war year.

Trade, whose outlays are the largest of the three groups, is expected to spend $364 million on new facilities, 9 per cent higher than in 1959 but still a little less than the previous peak in 1957. With the exception of the automotive trade, all the component groups plan to increase their capital outlays this year.

The expansion in outlays for new facilities in financial services has been almost continuous and very rapid; anticipated outlays of $299 million for 1960, if realized, would represent a fourfold increase from expenditures a decade earlier and a 22 per cent increase from last year. The financial services group consists of three components, banks, insurance, trust and loan companies, and "other" financial

[1] Anticipated.
[2] Includes wholesale and retail trade, finance, insurance and real estate, and commercial services.
[3] Includes, in addition to government departments, government-owned enterprises, federal government housing, provincial hospitals, schools, universities and municipal hospitals and schools.

organizations, which includes real estate companies engaged in developing, owning and leasing property. The last named, the most rapidly growing and much the largest of the three in terms of its capital outlays, plan outlays of $227 million in 1960, compared with $181 million in 1959.

Outlays of $192 million are planned for commercial services in 1960, 6 per cent higher than in 1959 and moderately above the previous peak in 1957.

Institutional Services

The growth of population, particularly in the younger age groups, and the extension of social security schemes, have necessitated heavy expenditures on schools, universities and hospitals. The capital programme for institutional services calls for expenditures of $625 million in 1960, nearly a threefold increase from a decade earlier and 18 per cent higher than in 1959. The programme for hospitals in 1960 is $201 million, 35 per cent more than in 1959; substantial increases are scheduled for schools and universities, bringing the combined total to $356 million, 12 per cent higher than a year ago.

Housing

It is estimated that investment in new housing in 1960 will amount to $1,696 million, compared with $1,759 million in 1959 and an all-time high of $1,782 million in 1958. This estimate assumes that the number of houses started will be 10 to 15 per cent less than the 141,000 started last year. However, with 82,000 houses under construction at the beginning of the year completions are likely to be close to last year's level of 146,000.

PRELIMINARY RELEASE OF THE DISTRIBUTION OF NON-FARM FAMILY INCOMES IN CANADA BY SIZE, 1958

The average income of all families and unattached individuals in 1958 was $4,544, more than 6 per cent higher than the average income of $4,269 received in 1957. Half of the families and individuals received incomes of more than $3,783 whereas in 1957 the median income was $3,624. Although the greater part of the increase was due to higher earnings in 1958, a substantial part was attributable to increases in government transfer payments such as old age pensions and family allowances. In 1958, for example, old age pensioners (70 years of age or older) received $660 for the full year compared to $534 in 1957, an increase of 23.5 per cent from 1957. Consumer prices, however, rose by between 2 and 3 per cent during 1958 so that only part of the increased money income represented an increase in real income.

The average income of families only (excluding unattached individuals) rose from $4,646 in 1957 to $4,919, an increase of nearly 6 per cent; the median income was $4,308. Approximately one-quarter had incomes below $3,000 while one-quarter had incomes of $6,000 or more.

Families and unattached individuals whose major source of income was wages and salaries received an average income of $4,851, a rise of 5 per cent over the average of $4,620 reported in 1957; families and unattached individuals whose major source of income was from self-employment averaged $6,059, an increase of 6 per cent over the 1957 average of $5,717. For both these groups of families, the percentage increase in average receipts of transfer payments was substantially greater than the percentage increase in average receipts of earned income so that increased earnings accounted for only part of the rise in family incomes. For families and individuals whose major source of income was from other money income (investments, transfer payments or pensions) the average income was $2,335, an increase of approximately 20 per cent from the 1957 average of $1,950. The median income, however, rose only moderately, from $1,198 to $1,223.

The percentage of families and unattached individuals with incomes below $2,000 dropped from 24.7 to 22.4 per cent, while those with incomes of $5,000 to $9,999 rose from 25.6 to 28.5 per cent and those with $10,000 and over from 3.7 to 4.5 per cent. In contrast in 1951, the first year for which estimates are available, 33.8 per cent had incomes below $2,000, while only 12.4 per cent had incomes of $5,000 to $9,999 and only 1.8 per cent had incomes of $10,000 or more.

The size distributions of incomes of families and unattached individuals for 1958 presented in this release are identical in scope and concept to estimates published earlier for selected years from 1951 to 1957. The 1957 estimates were released in D.B.S. publication 13-512 *Distribution of Non-Farm Incomes in Canada by Size, 1957*. Tables 1 and 2 of this publication correspond to the present estimates. Additional detail on the distribution of incomes in 1958 will be available late this year in D.B.S. publication 13-514, *Incomes, Liquid Assets and Indebtedness of Non-Farm Families in Canada, 1958*.

The **family** is defined as a group of individuals sharing a common dwelling unit and related by blood, marriage or adoption. **Unattached individuals** are persons living by themselves or rooming in a household where they are not related to other household members.

The income measured in these estimates consists of total money income receipts from the following sources: Wages and salaries (gross wages or salaries earned before deduction for income tax, unemployment insurance, etc.); net unincorporated business income (net income, gross income minus expenses, earned from self-employment either on own account or in an unincorporated business or in independent professional practice); investment income (bond interest, dividends, etc.); government transfer payments (such as old age pensions, unemployment insurance and family allowances); miscellaneous income (for example, retirement pensions and annuities).

Methods of estimation used to prepare the 1958 estimates differ from those used for 1957. The 1957 estimates were based upon survey data obtained from 7,750 families and adjusted by income tax statistics in the upper income brackets. Although, for 1958, income information was secured from 6,500 families as a by-product of a survey conducted in the spring of 1959 to collect information on liquid asset holdings and indebtedness, these data could not be used in conjunction with income tax statistics. The survey data were used to estimate the changes in average incomes between 1957 and 1958 and these estimated changes were used to project the income distributions from 1957 on the assumption that the shape of the distributions did not change between 1957 and 1958 (that is, that the Lorenz curve remained constant). The method used is the same as that used for estimating the distribution of incomes in 1955, described in Appendix I, D.B.S. publication 13-508, *Incomes, Liquid Assets and Indebtedness of Non-Farm Families in Canada, 1955*.

TABLE 1. Distribution of Families and Unattached Individuals (Number and Per Cent) by Income Groups and by Major Source of Income, 1958

INDUSTRIAL PRODUCTION

The index of industrial production rose in December, reflecting the settlement of the steel strike in the United States and the expanded manufacture of durables, particularly automobiles.

(1) Averages of unadjusted data.

(2) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

LABOUR FORCE AND LABOUR INCOME

The seasonally adjusted labour force was relatively unchanged in January but the number of persons with jobs increased slightly. Labour income in December increased due to a rise in industrial employment following the settlement of the U.S. steel strike.

(1)Averages of unadjusted data. (2)Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

RETAIL TRADE (concluded)

Sales of passenger cars were down sharply in December. Sales of clothing and furniture and appliances showed little change.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Although exports declined in December, a general upward trend has prevailed throughout the year. Imports, which had tended to level off in the latter part of 1959, rose in November.

(1)Annual estimates are as of June 1. (2)Seasonally adjusted at annual rates. (3)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4)Rough cords of 128 cu. ft. (5)In urban areas of 5,000 population and over. (6)Average of weekly rates. (7)Middle of month. (8)Revised according to new bench marks. (9)This total includes all generating agencies producing over ten million kilowatt hours per year (10)End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month ofoccurrence.

(1)Not applicable to figures on population and immigration. (2)Yukon and North-West Territories not included in figures for births, marriages and deaths. (3)Estimates are given by years as of June 1 and by quarters for Canada. (4)Exclusive of stillbirths. (5)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926–1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

(1)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. (2)Includes adjusting entry. (3)Includes residual error of estimate. (4)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. (5)Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see **D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."**

[1] The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

(1)Seasonal (formerly supplementary) benefit data included. (2)On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. (3)The number of new cases of recorded unemployment among insured persons. (4)Estimates are based on average weekly number of payments. (5)The number of calendar weeks during which a benefit payment was made. (6)Revised to relate to the Thursday nearest to the last day of the month. (7)Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants. **Source: Unemployment Insurance Commission and monthly reports of Unemployment Insurance Branch, D.B.S.**

(1) As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(2)The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾These totals include all generating agencies producing over ten million kilowatt hours per year. ⁽²⁾These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. ⁽³⁾Less imports. ⁽⁴⁾Total net generation less net exports. ⁽⁵⁾Mainly the amount used in electric boilers. **Source: Monthly Report, Electric Power Statistics, D.B.S.**

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. (3)Customs exports. (4)Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(1) Shipments for further processing within own firm and for sale in Canada. (2) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder ol the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. (1)Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. **Source: Building Permits, Business Finance Division. D.B.S.**

(1)The coverage was extended to 507 municipalities in 1948, and as of 1959 ,stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2) Planks and boards, flooring and square timber. (3) Hollow blocks including fireproofing and load-bearing tile. (4) For building insulation only. (5) Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6) Includes concrete chimney blocks. (7) Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. (1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices. Since August 1, 1958, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

(1)Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. (2) Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. (3)Annual data are monthly averages of crop year. (4)Includes eggs for hatching.

(1)Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.
(2)Includes stocks held by manufacturers, wholesalers and other warehouses.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1)Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2)Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3)Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4)In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

Dec. 1957-32	Mar. 1958-29	June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32	June, 1959-36

(5)Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. (6)Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1) Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2) As of January, 1958, statistics include the British Columbia Electric Railway. (3) As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. **Source: Railway Operating Statistics, D.B.S.**

(1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of $140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. (3)Mainly deposits of foreign banks. (4)Capital, rest fund and undivided profits as at the latest fiscal year-end. (5)Including issues payable in foreign currency. (6)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (7)Excluding Canadian day to day loans. (8)Loans to grain dealers and exporters. (9)Loans to finance purchase of Canada Savings Bonds at time of issue. (10)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (11)Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. (2) Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. (3) Less total float, i.e. cheques and other items in transit (net). (4) At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

(1)The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly figures for 1957 have not been revised to agree with the Canada total. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

(1)Ordinary, Industrial and Group. (2)Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. **Source: The Canadian Life Insurance Officers Association.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

(2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(3) Includes Printing and Publishing and Allied Industries.

DEC 10 1960

You read the *Canadian Statistical Review*

You know the value of accurate facts and figures

For the exporter there is a special source—

FOREIGN TRADE— that provides him with the facts and figures that can mean more sales and larger profits. FOREIGN TRADE gives an up-to-date picture of markets abroad because its reporters are Canadian Trade Commissioners living in the countries they write about. A sample copy will give you a small idea of the variety of products and the number of markets covered in FOREIGN TRADE. Write for one to the Editor, Department of Trade and Commerce, Ottawa.

A year's subscription to FOREIGN TRADE brings you 26 issues and costs only $2.00. Use the coupon to order yours.

Supervisor of Government Publications,
The Queen's Printer,
Ottawa, Canada.

Please send me *Foreign Trade* for a year. Enclosed is my cheque / money order for $2.00 ($5.00 outside Canada) made payable to the Receiver General of Canada.

THE QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1960

NATIONAL ACCOUNTS INCOME AND EXPENDITURE

FOURTH QUARTER AND PRELIMINARY ANNUAL 1959

Introductory Review

The recovery in Gross National Product, which began in 1958 as the economy emerged from a mild recession, continued during 1959. The upswing carried the Gross National Product to new levels in the first half of the year, but moderated in the third quarter when the expansion was checked by a combination of factors associated in large part with industrial disputes in Canada and the United States. In the fourth quarter the advance was resumed, with a further gain in the value of the nation's total output of goods and services of about 2 per cent from the preceding quarter, seasonally adjusted. For the year as a whole, the Gross National Product averaged about 6 per cent above the year 1958, and with final product prices higher by about 2 per cent, it is estimated that the physical volume of output in 1959 was about 4 per cent above that of the preceding year.[1] This compares with virtually no change in the physical volume of output in 1957 and 1958, and with a post-war average increase of 4 per cent per year.

The increase in output in 1959 was accompanied by broad changes in the composition of the nation's income and outlay. Over the course of the year, reversals in trend occurred in a number of major categories of demand, and the pattern of the nation's total expenditure showed a marked change. The following table provides some perspective on the nature and magnitude of these shifts in terms of year-to-year percentage changes.

Changes in Components of Gross National Expenditure

	Percentage changes		Change in billions of dollars
	1957 to 1958	1958 to 1959	1958 to 1959
Personal expenditure	5.4	5.8	1.2
Government expenditure	7.4	4.5	0.3
Residential construction	25.1	−1.1	–
Non-residential construction	− 9.4	−7.8	−0.2
Machinery and equipment	−14.9	9.4	0.2
Exports	− 1.0	5.1	0.3
Total final demand	**2.7**	**4.5**	**1.8**
Inventories	(−$0.6 b.)	(+$0.7 b.)	0.7
(Business only)	(−$0.6 b.)	(+$0.7 b.)	0.7
Imports	− 5.6	9.5	−(+0.7)
Gross National Product	**2.6**	**6.1**	**2.0**

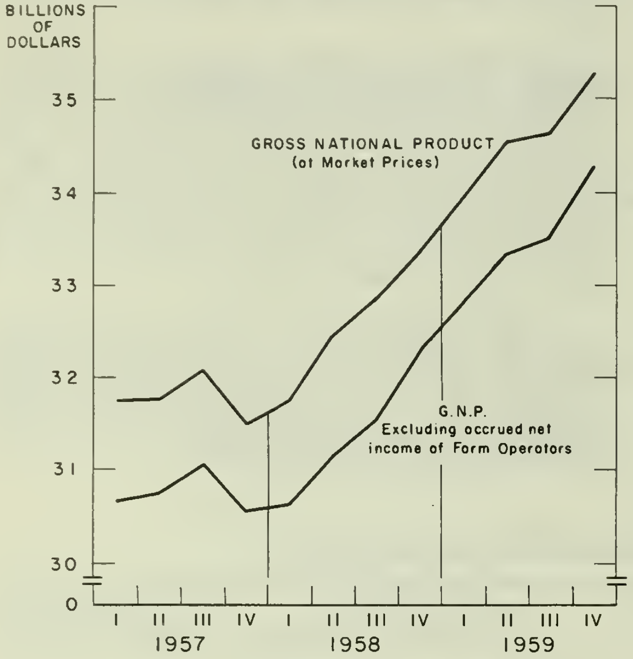
Much of the support to the rising level of production in 1959 came from the renewed build-up of inventories and the reversal of the down-trend in plant and equipment outlays during the year. Business inventories shifted from a position of heavy liquidation in 1958 to one of moderate accumulation in 1959; the turn-around here was the equivalent of about $0.7 billion in terms of new demands on production. The decline in business capital expenditures for new plant and equipment, which was moderating in the latter part of 1958, was reversed in 1959, and outlays by the business sector were providing a stimulus to the advance in final demand in the second and third quarters of the year; the slight decline in the fourth quarter appears to have been associated with the effects of the United States' steel strike on machinery and equipment investment in Canada. For the year as a whole, however, plant and equipment outlays were unchanged. On the other hand, outlays for new housing, which rose very sharply in 1958 (by 25 per cent) were moving downward through the first three quarters of 1959, recovering slightly in the fourth quarter as new mortgage money made available by the government was taken up. For the year as a whole, housing outlays were down very slightly from 1958.

---

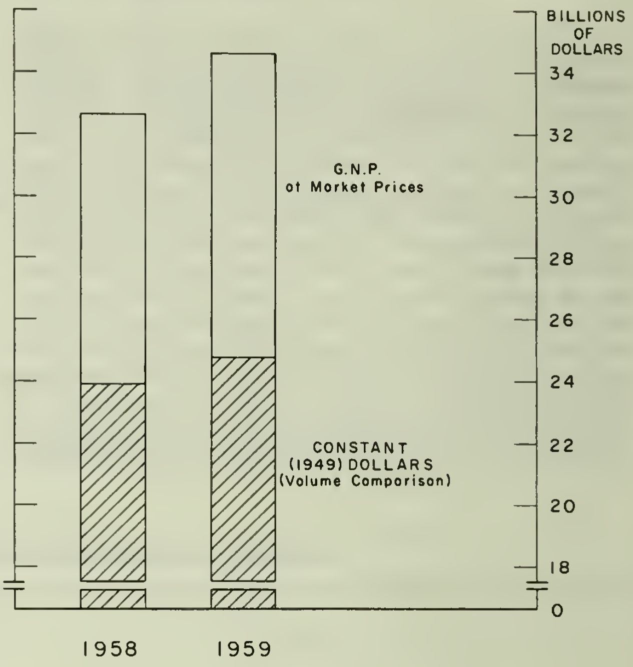
[1] The figures include the value of the 1959 grain crop, which is estimated to be about 7 per cent above the year 1958. However, the full effect of adverse weather conditions which delayed grain harvesting in the Prairie Provinces cannot yet be evaluated. It is assumed that the part of the crop now under snow will be harvested in the spring and will be of average quality.

GROSS NATIONAL PRODUCT SHOWED A MARKED RISE IN 1959 FOLLOWING THE UPSWING WHICH BEGAN IN 1958

(DATA SEASONALLY ADJUSTED AT ANNUAL RATES)

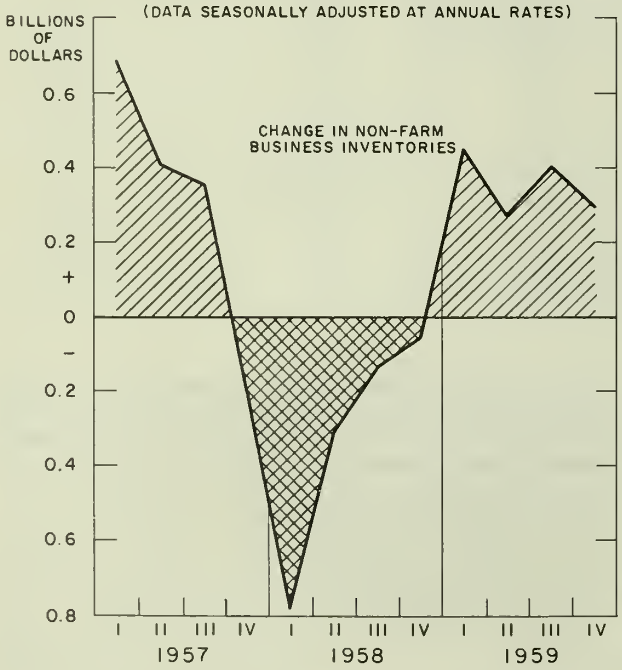


THE VALUE INCREASE FOR THE YEAR AS A WHOLE WAS ABOUT 6 PER CENT OVER 1958, WITH THE VOLUME OF PRODUCTION UP BY ABOUT 4 PER CENT



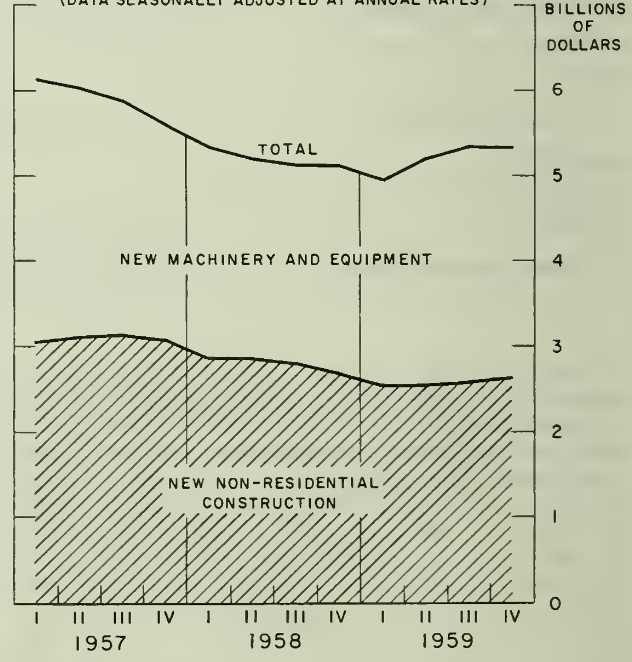
THE SWING IN BUSINESS INVENTORIES FROM LIQUIDATION IN 1958 TO ACCUMULATION IN 1959 CONTRIBUTED SUBSTANTIALLY TO THE INCREASE IN GROSS NATIONAL PRODUCT

(DATA SEASONALLY ADJUSTED AT ANNUAL RATES)

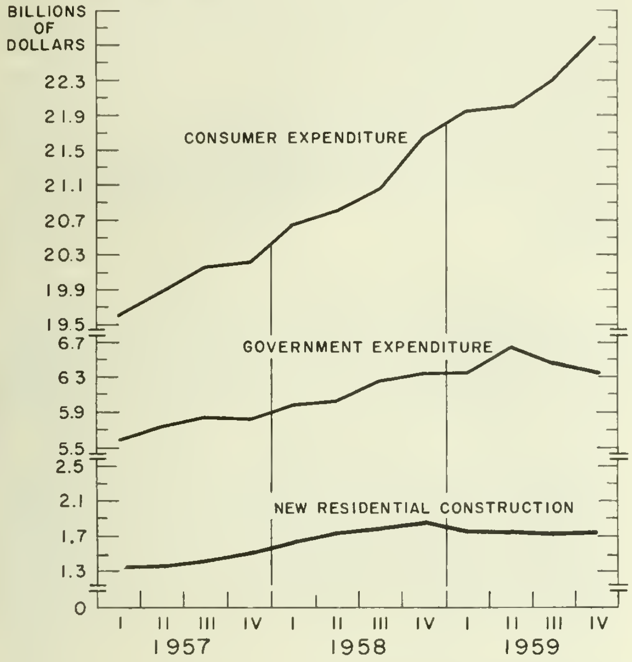


THE TWO-YEAR DOWNTREND OF BUSINESS OUTLAYS FOR PLANT AND EQUIPMENT WAS REVERSED IN THE EARLY PART OF 1959

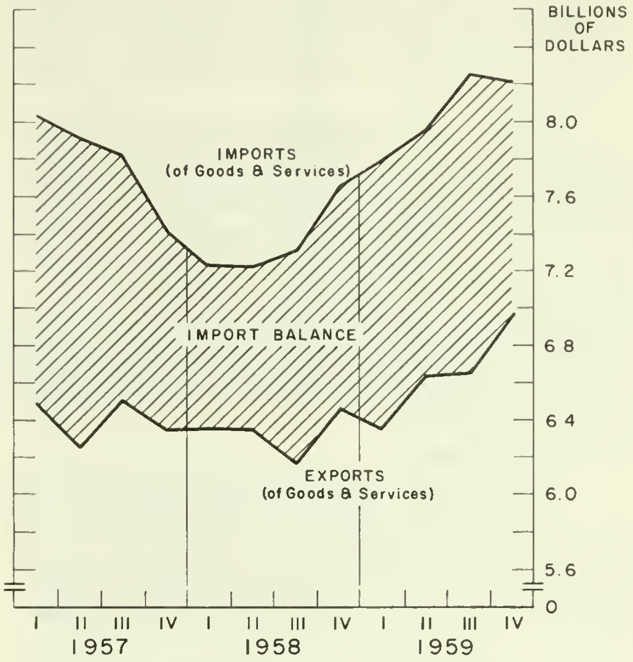
(DATA SEASONALLY ADJUSTED AT ANNUAL RATES)



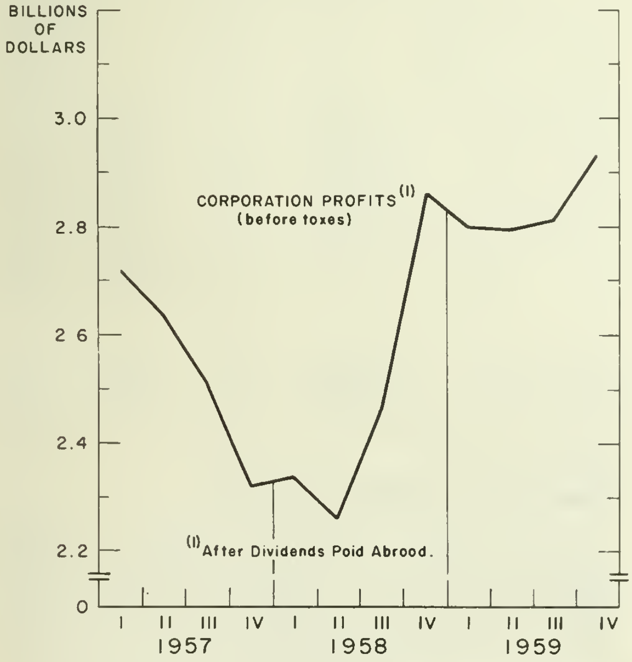
CONSUMER EXPENDITURE CONTINUED TO PROVIDE STRENGTH ON THE DEMAND SIDE. HOWEVER, THE UPWARD TRENDS IN HOUSING AND GOVERNMENT EXPENDITURE WERE INTERRUPTED DURING THE PERIOD



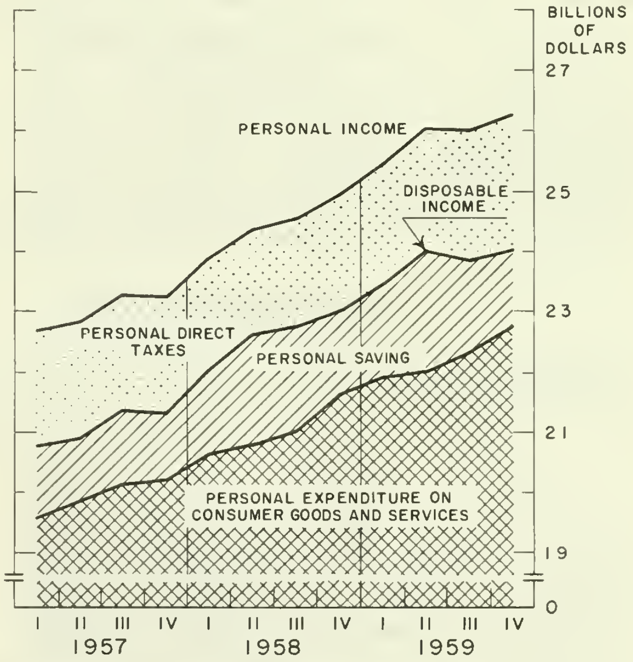
EXPORTS ROSE SUBSTANTIALLY, BUT THE RISE WAS ACCOMPANIED BY A MUCH SHARPER INCREASE IN IMPORTS, WITH A CONSEQUENT WIDENING OF THE DEFICIT



CORPORATION PROFITS LEVELLED OFF IN 1959, FOLLOWING THE SHARP UPSWING IN THE LAST HALF OF 1958



PERSONAL INCOME SHOWED A YEAR-TO-YEAR GAIN OF 6 PER CENT, WHICH WAS LARGELY ABSORBED BY THE RISE IN CONSUMER EXPENDITURES AND DIRECT TAXES



(ALL DATA AT SEASONALLY ADJUSTED ANNUAL RATES)

The personal and government sectors contributed significantly to the advance in output in 1959. Personal expenditure on consumer goods and services registered a slightly greater increase than in the previous year, and with prices up more moderately, the volume of consumption showed a more pronounced gain than in 1958. However, government expenditures on goods and services rose less sharply in 1959, by only 5 per cent, compared with 7 per cent in 1958. In the last half of the year, government outlays for goods and services declined.

Turning to transactions on international account, exports of goods and services, after having remained stable at a high level for two years despite the recession, rose by 5 per cent in 1959. Most of the gain was concentrated in the last half of the year. At the same time, imports of goods and services, which fell sharply in the recession period but were rising in the latter part of 1958, continued upward in 1959, and for the year as a whole showed a gain of 9 per cent. The deficit on current account widened substantially, but there was some narrowing of the merchandise deficit at year-end, on a seasonally adjusted basis.

Taken together, these shifts in the pattern of the nation's total expenditure produced a Gross National Product in 1959 which was about 6 per cent above the level of the year 1958, compared with a gain of about 2½ per cent in the 1957 - 1958 period.

The flow of income to the personal, business, and government sectors was also marked by changes in the trend of important income components and by shifts in the compositional pattern of the income aggregates in 1959. Transfer payments, which rose by 27 per cent between 1957 and 1958, made a much smaller contribution to the gain in personal income in 1959. The reverse is true of labour income, which showed only a small change between 1957 and 1958 but rose sharply in 1959, accounting for a much greater proportion of the increase in total personal income than in the previous year. While corporation profits showed little change over the four quarters of 1959, they were at an average rate about 14 per cent above the year 1958; this compares with a decline of less than 3 per cent between 1957 and 1958.

The shift in the pattern of profits, labour income, and transfer payments was largely responsible for the differing rates of change between national income and personal income in the two periods. In 1958, national income was affected by the small rise in labour income and the drop in profits, and showed only a 3 per cent gain; personal income advanced by 6 per cent, reflecting the sharp rise in transfer payments. In 1959, however, with profits and labour income showing substantial gains and transfer payments moderating, the advance in national income and in personal income were closely in line.

Changes in Major Income Components

	Percentage changes	
	1957 to 1958	1958 to 1959
Selected personal and business income components		
Wages, salaries, and supplementary labour income	2.7	7.8
Transfer payments	27.8	4.8
Personal income	6.2	6.4
Corporation profits after dividends paid abroad	−2.5	14.2
Capital consumption allowances	−1.8	5.3
Rents, interest, and miscellaneous investment income	5.8	3.9
Net income of non-farm unincorporated business	5.4	1.5
Accrued net income of farm operators from farm production	19.8	−7.1
National income	3.5	6.4
Selected government revenues (All levels of government)		
Direct personal taxes	−6.4	16.4
Corporation tax liabilities	−3.5	17.7
Indirect taxes	1.5	9.6

The expansion of activity in 1959 was characterized by a marked recovery in the tax revenues collected by or accruing to the government sector, reflecting the recovery in profits, higher employment and earnings, a higher level of imports, sales and shipments, and increases in tax rates. The changes in government revenues from the three major tax sources for all levels of government combined are shown in the table above.

Value, Volume, Price Comparisons

Taking the change in the price of all components together, it is estimated that the price element of total Gross National Expenditure was higher in 1959 by about 2 per cent. The value, volume and price components of each of the main expenditure categories are shown in the accompanying table:

Percent Changes, Value, Volume and Price

	1959 / 1958			Price Change[1]
	Value	Volume	Price[1]	Year 1958 / Year 1957
Personal expenditure	5.8	4.5	1.2	2.5
Goods	5.3	4.9	0.5	1.8
Non-durable	5.0	4.9	0.3	1.9
Durable	6.3	4.7	1.8	1.4
Services	6.8	3.7	2.7	3.6
Government expenditure	4.5	1.2	2.9	3.2
Business gross fixed capital formation	−0.2	− 2.9	3.0	2.1
New residential construction	−1.1	− 5.0	4.0	2.5
New non-residential construction	−7.8	−10.1	2.6	1.2
New machinery and equipment	9.4	6.9	2.5	2.7
Exports of goods and services	5.1	2.2	1.5	−0.2
Imports of goods and services	9.5	10.1	−0.4	1.3
Gross national expenditure	6.1	3.5	2.3	2.2

[1] The price comparisons shown above are based on a set of fixed weight price indexes (1955 = 100), and not upon the implicit price deflators which can be derived by dividing the value series by the volume series. The implicit deflators are weighted by changes in the expenditure pattern over time, and do not permit accurate measurements of price change. A specially constructed set of fixed weight price indexes has therefore been used for purposes of depicting price changes in the above table.

Final product prices continued to drift upward slightly between 1958 and 1959. In the over-the-year comparisons, the advance was about the same as that which occurred between 1957 and 1958. The rise in the price of consumer goods and services in 1959 was small, and amounted to less than half the price rise of the 1957-1958 period, but this development was accompanied by a somewhat larger increase in the price of capital goods and in exports. Prices of imported goods declined, reflecting for the most part a higher rate of exchange on the Canadian dollar.

Production and Employment

Most major industry divisions contributed to the rise in the physical volume of output in 1959. The sharpest increases were in forestry, mining, and public utilities. The almost uniformly upward trend of production in 1959 is in strong contrast to the mixed and largely offsetting movements that characterized output in the previous year. A large part of the increase from 1958 levels came in the first half of 1959; the rate of increase dropped in the second half, partly as a result of industrial disputes in Canada and the delayed effects of the steel strike in the United States.

Among the primary industries, an increase of about 9 per cent in forestry production was entirely attributable to pulpwood; output of other forest products was fractionally lower. The improvement in markets for some traditional metals and fuels and the continued expansion of output of new resource industries brought about a more than 10 per cent increase in mining production as a whole and relatively large gains in the output of several important products. Among these are nickel (31 per cent), copper (15 per cent), crude petroleum (12 per cent), uranium (18 per cent), and natural gas (24 per cent). Output of coal continued to decline as did that of lead and zinc. The underlying trend of mining production as a whole was strongly upward throughout the year and by December the index was nearly 15 cent higher than a year earlier.

The output of manufacturing industries was about 7 per cent higher in 1959 than in 1958; the gain in durables was about 8 per cent and in non-durables about 6 per cent. All the major divisions of manufacturing increased their production with the single exception of transportation equipment. Production in this industry was off slightly, partly as a result of the steep drop in activity in aircraft and parts. The largest increases in output were in iron and steel products (18 per cent), rubber products (17 per cent), textiles (12 per cent), products of petroleum and coal (11 per cent) and non-metallic mineral products (9 per cent); in paper products, printing and publishing, and electrical apparatus and supplies, the rise in production was close to the average for manufacturing industries as a whole; the remaining divisions recorded smaller gains. The expansion of output was particularly marked in some individual industries, notably agricultural implements (34 per cent), and primary iron and steel (38 per cent).

The rising trend of manufacturing production in 1959 was interrupted in the third quarter, when the prolonged industrial dispute in the woods industry in British Columbia affected production of durable goods. In the closing quarter the rise in manufacturing production was restrained by November lay-offs in the automotive industry due to shortages of steel among United States' suppliers. Nevertheless, production advanced 2 per cent in the final quarter of the year, after allowing for seasonal factors. By the end of the year the index of manufacturing output was 6 per cent above its level one year earlier. Non-durable manufacturing production was running 4 per cent above its previous 1957 peak, but durable manufacturing production was still 3 per cent below the peak reached in July, 1956.

The relatively large year-to-year advance in the output of public utilities — 14 per cent — was mainly the result of a huge increase in the distribution of natural gas to final users; distribution by electric power utilities was up less than 10 per cent.

The volume of construction is estimated to have been 3 per cent lower in 1959 than in 1958. The increase in the volume of public construction did not fully offset the decline in private construction.

All the service-producing industries shared in the 4½ per cent advance in output for the group as a whole. A 6 per cent gain in volume in transportation, communication and storage contrasts with the 4 per cent decline in 1958. Railway car loadings were only slightly higher but most other forms of transport handled a decidedly larger volume of business, notably shipping, air transport, and oil pipelines.

The gains in production outlined above were accompanied by an increase in total employment in 1959. The number of persons with jobs was close to 3 per cent higher than in 1958; the number with jobs in the non-farm sector was 3½ per cent higher. This growth in employment opportunities in 1959 reduced the number of persons without jobs and seeking work from 6.6 to 5.6 per cent of the labour force.

The Fourth Quarter

The advance in Gross National Product which had been temporarily checked in the third quarter of 1959 was resumed in the final quarter of the year. Total production of goods and services is estimated to have risen by about 2 per cent over the third quarter on a seasonally adjusted basis. Price factors were somewhat more prominent in the fourth quarter than had been the case throughout the earlier part of the year, reflecting largely irregular movements in food prices. The increase in the physical volume of production during the quarter was therefore somewhat less than that indicated by the value figures.

The fourth quarter rise in output was widely diffused through the economy, with all industry groups showing an advance over the third quarter. The increase in forestry was particularly sharp, following settlement in mid-September of the work stoppage in the primary wood and wood fabricating industries in British Columbia. Manufacturing production, which had declined in the third quarter, was higher by 2 per cent in the fourth. Durable goods manufacturing rose by 3 per cent, despite the fact that output was off sharply in November as shortages of steel from the United States severely affected motor vehicle production. In part, the fourth quarter rise in the durable index reflected higher output in the wood and wood products industries, and in part a sharp increase in the operating levels of the Canadian primary iron and steel industry. Non-durable manufacturing production, which had also declined in the third quarter, was higher in the fourth by 1 per cent. Mining, quarrying, and oil wells advanced by 2 per cent in the quarter, while construction and the service industries all showed gains ranging from 1 to 3 per cent.

The major expansionary factors on the demand side during the quarter were a further rise of 2 per cent in personal expenditure on consumer goods and services, and a sharp increase in exports of goods and services. The gain in consumer outlays amounted to 2 per cent, and was somewhat more pronounced in the durable group than in non-durables and services. The chief contributing factor to the rise in durable goods was an increase of more than 8 per cent in purchases of new and used automobiles. In the non-durables group, a very sharp increase occurred in purchases of natural and manufactured gas, reflecting the installation of new transmission facilities which came into operation during the summer and fall of 1959. Gains in most other non-durable items ranged from 1 to 3 per cent. Services (including net expenditure abroad) were higher in the quarter by about 2 per cent.

The pronounced rise in exports of goods and services in the fourth quarter, amounting to 5 per cent, was entirely attributable to the merchandise items, with transactions on invisible account showing a small decline. Three main commodity groups accounted for the major part of the increase in merchandise items; exports of wood and wood products were higher by 7 per cent, as supplies became more plentiful following the end of the work stoppage in British Columbia; exports of iron and its products rose by 34 per cent, reflecting higher purchases of steel and iron ore from Canadian producers; and exports of non-ferrous metals rose by 9 per cent, associated largely with higher sales of aluminum, copper and nickel. The sharp increase in exports of goods and services in the fourth quarter was accompanied by a fractional decline in imports of goods and services, so that the deficit on current account narrowed considerably.

After moving upward for two successive quarters, business outlays for plant and equipment declined slightly in the fourth quarter of 1959. The decline was entirely attributable to a drop in outlays for new machinery and equipment and appears to have been related to supply difficulties associated with the steel strike in the United States; both domestic shipments and imports of machinery and equipment were down in the fourth quarter on a seasonally adjusted basis. Outlays for new non-residential construction were somewhat higher in the fourth quarter than in the third.

Outlays for new housing, which had been declining since early 1959, showed a small increase in the fourth quarter of the year. The gain was associated with a 12 per cent rise in housing "starts" following the taking up of additional mortgage funds made available from government sources; "completions" continued to decline in the quarter.

The rate of business inventory accumulation in the fourth quarter was somewhat lower than in the third. However, the build-up in manufacturing continued at an accelerated rate mainly due to a sharp increase in the rate at which iron and steel products were being accumulated. The rate of accumulation of wholesale inventories was only slightly below that of the third quarter, reflecting developments in the iron and steel and food groups. At retail, however, the rate of accumulation fell sharply, from $160 million in the third quarter to $40 million in the fourth quarter. The decline in the build-up in this group was more than accounted for by the sharp swing in retail holdings of automobiles from a position of accumulation in the third quarter to sizable liquidation in the fourth quarter, on a seasonally adjusted basis. Partially offsetting this swing in retail holdings of automobiles was a fairly substantial rise in holdings of lumber, building materials and farm implements.

COMPONENTS OF GROSS NATIONAL EXPENDITURE

Personal Expenditure on Consumer Goods and Services

Moderate increases in most categories accompanied a 6 per cent rise in personal expenditure on consumer goods and services in 1959. While consumer prices continued to advance, the upward trend moderated. The greater part of the increase in spending in 1959 thus represented a gain in real consumption. On a per capita basis, consumer expenditure showed the first volume increase since 1956.

Consumer expenditure on non-durable goods rose by 5 per cent in 1959. All categories showed increases of varying magnitude, the most significant occurring in gas (34 per cent), electricity and tobacco products (each up 10 per cent), and auto parts and accessories (9 per cent); other important changes occurred in expenditures on alcoholic beverages, clothing, fuel, and soaps and cleaning supplies, all of which increased by amounts varying between 4 per cent and 6 per cent. Expenditures on food increased by about 3½ per cent, one of the more moderate increases in recent years. However, with food prices somewhat lower, the gain in real food consumption was considerably larger.

Expenditure on durables rose more than 6 per cent, the major part of which is accounted for by a 9 per cent gain in purchases of new and used automobiles. However, there was a significant advance in outlays for other durables, notably home furnishings (6 per cent) and appliances and radios (6 per cent); purchases of furniture showed little change.

The 11 per cent gain in sales of new passenger cars in 1959 was the largest since 1955 when they rose by 28 per cent. In contrast to 1955, however, sales of imported European and British models in 1959 accounted for 18 per cent by value of all new car sales, rising by 45 per cent over the year 1958. Sales of domestic and United States manufactured vehicles rose by 6 per cent.

The rise in durable goods purchased in 1959 was accompanied by an increase in consumer credit outstanding. Between December 1958 and December 1959, total consumer credit outstanding on the books of finance companies and retail dealers rose by 6 per cent. Unsecured personal loans by chartered banks (excluding home improvement loans) rose by 30 per cent in the same period.

Continuing to make relatively large gains, expenditure on services rose almost 7 per cent. The most significant increases were in outlays for shelter (8 per cent), medical care (9 per cent) and household operation (8 per cent).

The advance in personal expenditure in 1959 was closely in line with the increase in disposable income so that the level of personal saving showed little change. As a percentage of disposable income, personal saving was 6.7 per cent in 1959 compared with 7.1 per cent in 1958, rates of saving which in both cases are relatively high by the standards of post-war years.

Investment in Business Inventories

The accumulation of business inventories in 1959 amounted to $355 million, in contrast to a liquidation of $323 million in 1958. This shift of nearly $700 million between the two years was an important factor in economic recovery and accounted for almost one-third of the $2.0 billion rise in Gross National Product in 1959.

Change in Business Inventories

	1957	1958	1959
Manufacturing	128	-257	134
Wholesale	75	- 53	72
Retail	32	- 9	134
Other	76	- 4	15
Total	**311**	**-323**	**355**

Nearly 60 per cent of the turn-around in business inventories took place in manufacturing. The building up of stocks did not keep pace with the growth in sales, and ratios of stocks to shipments fell significantly between 1958 and 1959 in both the durable and non-durable segments of manufacturing. The turn-around in manufacturing was almost totally due to the durable goods industries build-up. All durable groups showed a positive year-to-year shift, the most pronounced of all being in the iron and steel, and transportation equipment industries. In the non-durables group, while stocks of food and chemicals were depleted heavily, this liquidation was counter-balanced by a build-up in the petroleum, rubber and clothing industries.

Wholesalers built up stocks in 1959, after having drawn them down in 1958. As in manufacturing, stock-sales ratios were lower in 1959 than in 1958. Accumulation of inventories was fairly widespread among durable and non-durable goods' wholesalers, and included substantial build-ups in industrial machinery and equipment and in petroleum products.

Retail traders also built up stocks in 1959 after having depleted them in 1958. Stock-sales ratios however appeared slightly higher than those in 1958. Both durable and non-durable goods' retailers increased their holdings of inventories in 1959.

Business Gross Fixed Capital Formation

At a level of $7.0 billion, expenditures on construction and machinery and equipment remained almost unchanged in 1959. However, this stable aggregate conceals important changes among components.

Non-residential construction fell to $2.6 billion, nearly 8 per cent lower than in 1958. The decline in construction, mainly concentrated in engineering works, reflected the completion of certain large projects, such as pipelines, electric power installations and the St. Lawrence Seaway, reinforced by a decided drop in expenditures for construction by manufacturing industries.

At the same time, there was an upsurge in outlays for machinery and equipment which rose to $2.6 billion, more than 9 per cent above the level of the preceding year.[2] This increase was supported by higher imports and domestic shipments of machinery and equipment, which were both up more than 10 per cent. New orders in the industries producing capital goods (excluding transportation equipment) averaged higher by 20 per cent. Notable gains were recorded in purchases of farm machinery (22 per cent), and commercial vehicles (17 per cent).

The value of residential construction, at $1.7 billion, was slightly lower than in 1958. The decline reflects a 14 per cent drop in housing units started and virtually no change in completions. Approvals of N.H.A. loans of all kinds fell by nearly one-third. Approved lenders, in the face of strong competing demands for funds and rising interest rates, curtailed their mortgage lending sharply. From September 1st, Central Mortgage and Housing Corporation made direct loans available to builders. In these circumstances, outlays for housing rose a little in the closing quarter of the year.

Exports and Imports of Goods and Services

In a situation of vigorous recovery in the United States and expanding economic activity in other industrialized countries, exports of goods and services rose to $6.7 billion in 1959, 5 per cent higher than the levels attained in 1957 and 1958. The rate of increase was about the same for merchandise exports as for invisible items.

Among merchandise exports, the products of the leading primary industries were prominent in raising the total. Thus exports of forest products, metals and minerals were up over 10 per cent. Exports of iron and its products showed the largest relative gain of all the main commodity groups, rising by almost one-third, in contrast to a decline of about one-sixth in 1958. This unusually large increase was related to the strike-induced shortage of steel in the United States. Among other products showing relatively large gains were lumber, pulp and paper, uranium and some other non-ferrous metals. These gains were partially offset by lower sales of some agricultural products, including grains and cattle; and of some manufactured products, namely, aircraft and ships, sales having been extraordinarily high in the previous year.

So far as invisible items are concerned, receipts from the tourist trade, from freight and shipping, from miscellaneous services and in the form of interest and dividends were all higher in 1959 than in 1958. On the other hand, gold production available for export was lower. Receipts from services totalled $1.5 billion, compared with $1.4 billion the previous year.

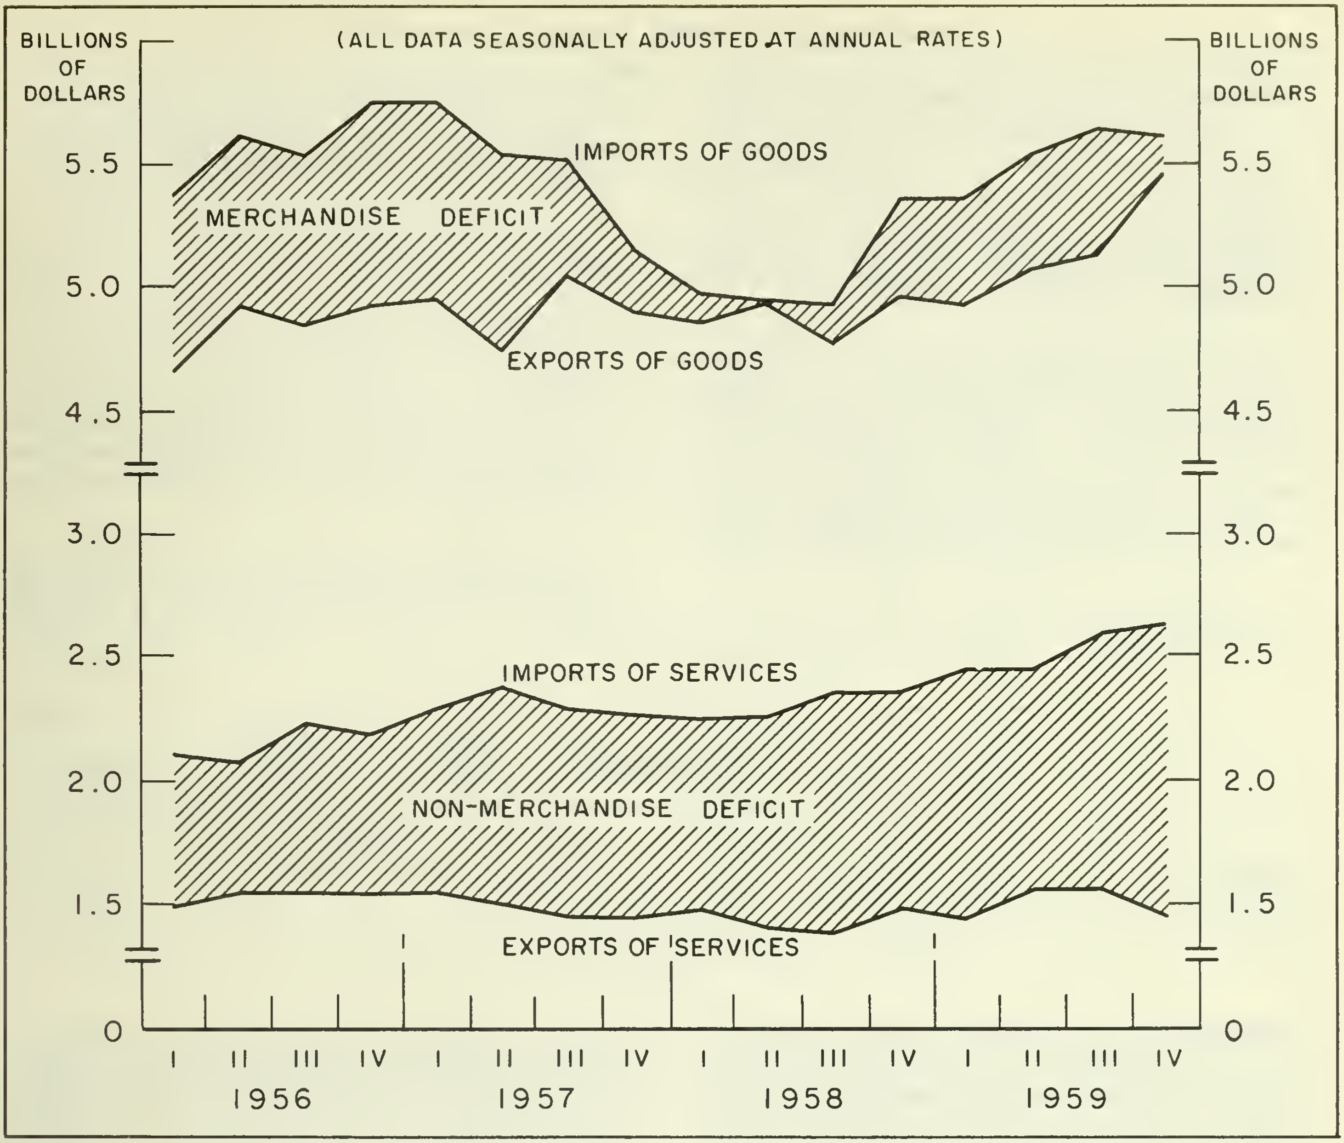
As has been characteristic of periods of rising economic activity, imports of goods and services advanced sharply in 1959, reaching an annual total of $8.1 billion, 9½ per cent higher than in 1958. Payments for merchandise imports and for services rose in about the same proportion.

In spite of the substantial increase in merchandise imports in 1959, the level was somewhat below the peak in 1956. The gains were well distributed and included industrial machinery, farm machinery, consumer goods, both durable and non-durable, and industrial materials to support the higher level of production and to replenish stocks. Imports of certain items, such as primary steel and steel pipe, were significantly lower. The largest increase in imports came in the second quarter of the year; thereafter there was little change, seasonal factors apart.

Payments for all items in the service account were substantially higher in 1959 than in 1958. The 12 per cent increase in remittances of interest and dividends reflected growing indebtedness, higher interest rates, and larger dividend payments to nonresidents. The rise in merchandise imports, particularly from overseas countries, swelled payments for freight and shipping. Higher economic activity

---

[2] The 1959 annual figure is $150 million higher than that shown in "Private and Public Investment in Canada, Outlook 1960", to take account of later available information. This adjustment is included in the quarterly distribution of expenditures on new machinery and equipment.



brought larger payments for business services. Payments on tourist account were also up considerably.

The consequence of the changes in exports and imports of goods and services described above was a deficit on current international account (on the National Accounts basis) of $1.4 billion, compared with one of $1.0 billion in 1958, and slightly above the previous peak in 1957. Of this deficit about $400 million was on merchandise account. The $1.0 billion deficit on service account, continuing the steady growth characteristic of recent years, was more than double the deficit from this source in 1955. Prices of imports were slightly lower, while prices of exports were moderately higher. Thus there was some improvement in the terms of trade.

Government Expenditure on Goods and Services

Government expenditure on goods and services rose to $6.4 billion, about 5 per cent higher than in 1958. All this advance is attributable to provincial and municipal governments; it reflects increased wages and salaries and larger expenditures of a capital nature. Federal government expenditures were down slightly, reflecting a decline in outlays for defence of about 6 per cent, which was largely offset by increased spending for other purposes.

Wages, Salaries, and Supplementary Labour Income

Labour income rose to $17.7 billion in 1959, nearly 8 per cent higher than in the previous year. Unlike 1958, a significant part of the advance reflected gains in employment; a small part came from somewhat longer hours of work. The upward trend in average earnings continued to contribute substantially to the advance in labour income.

All major industries shared in the increase in labour income in 1959, in contrast to the situation in 1958 when income failed to rise in several important industries. The largest gain occurred in the service group,[3] where income was higher by more than 13 per cent. Income in government service and in the construction industry, up more than 9 per cent, also registered better than average gains. A small increase in employment (1 per cent) and in hours of work (1 per cent), together with substantially higher hourly wages (4 per cent), raised income in manufacturing by 6 per cent, in contrast to a slight decline in the preceding year. Income in mining rose 5 per cent, in spite of an unchanged volume of employment, reflecting some increase in hours worked but mainly higher average hourly earnings. The increases in income in the transportation, communications and storage group, in finance, insurance and real estate, in public utilities and in trade were all within a narrow range and somewhat below the all industry average. With a significant improvement in employment in forestry, income rose more than 6 per cent, as opposed to a sharp decline in the previous year.

The factors contributing to the advance in labour income in 1959 for two major industries for which data are available are shown in the following table:

	Employment	Hours worked per week	Average hourly earnings	Labour income
	per cent			
Manufacturing	1.2	1.2	3.6	5.8
Mining	—	—	4.1	4.9

Corporate Profits and Other Investment Income

Characteristically sensitive to changes in the tempo of economic activity, corporate profits reversed their downward trend in the middle of 1958 and rose sharply in the closing quarter; they remained high in 1959, reaching an annual total as measured in the National Accounts of $2.8 billion, a rise of 14 per cent in contrast to a decline of 3 per cent in the previous year. Dividends paid abroad, which are not included in the figure set out above, rose by 10 per cent.

Increases in profits were widespread by industry and in many cases extremely large, particularly in those industries whose earnings had deteriorated during the recession. Thus profits in mining were up 18 per cent, following an even sharper decline in 1958. The same rate of increase occurred in manufacturing industries, with especially large gains in iron and steel (35 per cent) and in chemical products (24 per cent). Among the manufacturing industries, only non-metallic mineral products and products of petroleum and coal failed to record any rise in profits.

Earnings in the goods-handling industries, like the goods-producing industries, had felt the impact of the recession and responded to the upswing in economic activity in 1959. Thus profits in transportation, communication and storage rose sharply, after having fallen a little in 1958. Profits in wholesale trade also recovered from their recessionary decline. In retail trade, in the financial group and in services, profits were either unchanged or slightly lower, in contrast to the situation in 1958 when profits in the service-connected industries continued to rise.

Rents, interest, and miscellaneous investment income, estimated at $2.1 billion, rose by 4 per cent in 1959. The advance in rental income continued to reflect the growth of the housing stock and a further slight increase in rents. With the rise in interest rates, interest receipts of persons and governments were sharply higher in 1959. However, a large part of these interest receipts take the form of interest paid on the government debt which is not included as a part of National Income. Trading profits of government enterprises were slightly higher in 1959, and investment income of life insurance companies and industrial pension funds rose sharply.

Net Income of Unincorporated Business

Estimated at $1.1 billion in 1959, accrued net income of farm operators was about 7 per cent below the preceding year. This estimate involves little change in farm gross income, accompanied by a rise in farm operating expenses. The value of the new crop is estimated to have been higher by 7 per cent. This estimate, based on the November forecast, assumes that the part of the crop now under snow in the Prairies will be harvested in the spring and will be of average quality. The full effects of the adverse harvesting conditions in the Prairie Provinces cannot be evaluated at the present time.

---

[1] Includes items in investment income and an estimated amount for Newfoundland.

Income of unincorporated business, non-farm, was $2.2 billion, somewhat higher than in 1958. The major part of the increase originated in the service industries which account for about one-third of the total estimate. Income originating in retail trade and construction, which come next in order of importance, was off slightly.

Indirect Taxes Less Subsidies

Indirect taxes less subsidies reached an estimated level of $4.2 billion in 1959, 9 per cent higher than in the previous year. The sharpest increase in indirect taxes, 11 per cent, was at the Federal level and the major part of it was in excise taxes which rose by 13 per cent. Customs import duties moved up in line with imports and were nearly 9 per cent above the previous year. The April Budget introduced higher rates of taxes and duties on tobacco products and spirits, in addition to an increase in the sales tax to help finance the old age security scheme. Thus Federal revenues from indirect taxes reflect changes in rates as well as expanding activity.

Gasoline and sales taxes, and miscellaneous taxes on natural resources account for most of the increase in indirect taxes at the Provincial level, which were up by 7 per cent; higher real and personal property taxes largely account for the rise of 9 per cent at the municipal level.

Subsidies rose very sharply in 1959, reflecting mainly higher losses incurred under the Agricultural Commodities Stabilization program.

National Saving and Investment

Gross national saving increased by 9 per cent in 1959, from $5.4 billion in 1958 to $5.9 billion in 1959. This was the first increase in national saving since 1956. Virtually all the domestic sectors contributed towards this improvement in the national saving picture.

The business sector showed a very significant improvement with an increase of 6½ per cent, saving in the personal sector decreased by 1 per cent, while the decline in the dissaving (deficit) of the government sector amounted to over 40 per cent. With an increase of approximately 6 per cent in Gross National Product from 1958 to 1959, and an increase of 9 per cent in national saving over the same period, the proportion of national saving to Gross National Product changed slightly over the two years, from 16.6 per cent in 1958 to 17.0 per cent in 1959.

	1958	1959	Change 1958 to 1959
	billions of dollars		
Personal saving	1.6	1.6	—
Business saving	4.8	5.1	0.3

Gross national saving	**5.4**	**5.9**	**0.5**
Business gross fixed capital formation	7.0	7.0	—
Change in inventories	-0.4	0.3	0.7
Net foreign investment	-1.0	-1.4	-0.4
Residual error of estimate	-0.1	—	
Gross national investment	**5.4**	**5.9**	**0.5**

Note: Figures will not add by + .1 or – .1 due to rounding.

The nation's total fixed capital investment program for housing, non-residential construction, and machinery and equipment remained virtually unchanged between 1958 and 1959. The increase in saving took the form of increased investment in inventories, which showed a very significant change over the period, with the turn-around amounting to $0.7 billion. As in previous years, the amount of saving available from domestic sources was insufficient to support the investment program. The short-fall in the nation's saving was met by drawing upon foreign sources and the deficit on current account in 1959 amounted to $1.4 billion, an increase of about 36 per cent over the deficit in 1958. The deficit in 1959 was slightly above the previous peak year 1957.

TECHNICAL NOTE

Revisions to Data

The figures published in the present report will be held firm throughout 1960. Revisions to basic source data for 1958 and 1959 which accumulate during the course of the year will not be incorporated until March, 1961, at the time of the fourth quarter and preliminary annual 1960 report. In the past, it has been the practice to revise the Accounts at the time of the fourth quarter and preliminary annual release (March) to bring the data into line with the results of the private and public investment survey; and again in the fall, to bring in revisions to other basic source material which becomes available about mid-year. It has become apparent that two sets of revisions per year is a considerable inconvenience to the users of the Accounts, notwithstanding the earlier up-dating of the figures. In future, therefore, all outstanding revisions will be incorporated at one time with the release of the fourth quarter and preliminary annual report.

INDUSTRIAL PRODUCTION

Total industrial production rose by 2 per cent in January, with the gain reflecting widespread increases in non-durable manufacturing output, and a sharp advance in motor vehicle production.

(1) Averages of unadjusted data.

(2) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

LABOUR FORCE AND LABOUR INCOME

Persons with jobs increased in February for the second consecutive month; however, persons without jobs and seeking work as a percentage of the total labour force were also fractionally higher.

Labour income in December showed little change from the previous month.

(1)Averages of unadjusted data. (2)Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D., or months for cyclical dominance.

RETAIL TRADE (concluded)

With supply improving following settlement of the United States' steel strike, sales of new passenger cars in January recovered from their December low, but failed to reach the levels prevailing earlier in 1959.

(1) Averages or totals of unadjusted data. (2) Seasonally adjusted at annual rates.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Exports increased in January, continuing the strong upward trend which developed in 1959. Imports were showing a tendency to level out toward the end of last year.

(1)Annual estimates are as of June 1. (2)Seasonally adjusted at annual rates. (3)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4)Rough cords of 128 cu. ft. (5)In urban areas of 5,000 population and over. (6)Average of weekly rates. (7)Middle of month. (8)Revised according to new bench marks. (9)This total includes all generating agencies producing over ten million kilowatt hours per year (10)End of period. Including personal savings deposits.

(1)"De facto" population. Annual data are for June. (2)At current market prices. Annual data are totals of the four quarters. (3)Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4)All manufactured products. (5)Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial_Vital Statitsics offices during the month under review, regardless of the month of occurrence.

(1)Not applicable to figures on population and immigration. (2)Yukon and North-West Territories not included in figures for births, marriages and deaths. (3)Estimates are given by years as of June 1 and by quarters for Canada. (4)Exclusive of stillbirths. (5)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926–1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

(1)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. (2)Includes adjusting entry. (3)Includes residual error of estimate. (4)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. (5)Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see **D.B.S. Reference Paper** (61-502) **"Revised Index of Industrial Production, 1935-57."**

[1]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

(1)Seasonal (formerly supplementary) benefit data included. (2)On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. (3)The number of new cases of recorded unemployment among insured persons. (4)Estimates are based on average weekly number of payments. (5)The number of calendar weeks during which a benefit payment was made. (6)Revised to relate to the Thursday nearest to the last day of the month. (7)Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants. **Source: Unemployment Insurance Commission and monthly reports of Unemployment Insurance Branch, D.B.S.**

(1) The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. (2)The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1)These totals include all generating agencies producing over ten million kilowatt hours per year. (2)These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. (3)Less imports. (4)Total net generation less net exports. (5)Mainly the amount used in electric boilers. **Source: Monthly Report, Electric Power Statistics, D.B.S.**

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing hacklogs. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each i industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1) Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2) Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. (3) Customs exports. (4) Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(1)Shipments for further processing within own firm and for sale in Canada. (2)Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1)Includes some silvery pig iron formerly included with ferro-alloys. (2)Excluding shipments for processing. (3)Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. (4)Monthly average. (5)Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. (1)Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. **Source: Building Permits, Business Finance Division. D.B.S.**

---

(1)The coverage was extended to 507 municipalities in 1948, and as of 1959 ,stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Planks and boards, flooring and square timber. (3)Hollow blocks including fireproofing and load-bearing tile. (4)For building insulation only. (5)Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6)Includes concrete chimney blocks. (7)Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. (1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices. Since August 1, 1958, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

(1)Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. (2) Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. (3)Annual data are monthly averages of crop year. (4)Includes eggs for hatching.

(1) Customs exports are adjusted to reflect actual pbysical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

(2) Includes stocks held by manufacturers, wholesalers and other warehouses.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1)Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2)Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3)Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4)In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1958–31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32	June, 1959-36	Sept. 1959-44	Dec. 1959-40

(5)Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. (6)Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1)Does not include re-exports. (2)As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately $2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960. (3)As from January 1958, includes square timber, formerly included with "Other wood and paper." (4)As from January 1958, excludes square timber, now included with "Lumber and timber." (5)Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

Source: Trade of Canada, D.B.S.

(1) Export columns do not include re-exports except for Column 2. (2) Export and import totals on the revised basis will appear in the April issue. There will also be some changes in our breakdown by areas. (3) Since January, 1958, includes Alaska, formerly included with Rest of the World (Others). (4) Belgium, Luxembourg and the Netherlands. (5) Includes Ireland. **Source: Trade of Canada D.B.S.**

(1)Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2)As of January, 1958, statistics include the British Columbia Electric Railway. (3)As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. **Source: Railway Operating Statistics, D.B.S.**

(1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)Mainly deposits of foreign banks. (3)Capital, rest fund and undivided profits as at the latest fiscal year-end. (4)Including issues payable in foreign currency. (5)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (6)Excluding Canadian day to day loans. (7)Loans to grain dealers and exporters. (8)Loans to finance purchase of Canada Savings bonds at time of issue. (9)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (10)Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. (2) Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. (3) Less total float, i.e. cheques and other items in transit (net). (4) At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

(1)The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

(2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(3) Includes Printing and Publishing and Allied Industries.

DBS Is At Your Service . . . . . .

The Dominion Bureau of Statistics collects, compiles and publishes statistical data relating to a wide range and variety of the economic and social activities and conditions of the Canadian people.

To make this information readily available to users, DBS publishes some 500 seasonal, monthly, quarterly, semi-annual, annual and biennial reports. Together these contain the statistical facts that measure the state of the national economy, its functioning and its growth.

DBS publishes regular reports on the following and other subjects:

- ▸ **Agriculture** - Farm Crops, Livestock and Incomes
- ▸ **Construction** - Residential - Engineering and General Building
- ▸ **Education** - Schools, Universities and Libraries
- ▸ **Foreign Trade** - Imports and Exports - Travel - International Payments
- ▸ **Health and Welfare** - Public Health - Hospitals - Births, Deaths and Marriages - Crime
- ▸ **Labour** - Labour Force - Employment and Earnings - Labour Income - Unemployment
- ▸ **Manufacturing** - Beverages and Foods to Tobacco and Wood Products
- ▸ **Merchandising** - Retail - Wholesale - Services - Credit
- ▸ **Prices** - Consumer - Wholesale - Securities
- ▸ **Public Finance** - Federal, Provincial and Municipal Governments
- ▸ **Transportation** - Air - Rail - Road - Water - Pipe Lines
- ▸ **Utilities** - Electric Power
- ▸ **Fishing** ▸ **Forestry** ▸ **Mining**

THE QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1960

RETAIL TRADE IN 1959

Retail sales continued to advance in 1959, supported by expanding personal incomes and sharply increased use of consumer credit. The rise in sales amounted to about 5 per cent, compared with about 4 per cent in each of the two preceding years. Since prices of goods at retail were only fractionally higher, the gain in the volume of sales matched fairly closely the increase in value. In 1958 and even more in 1957, a significant part of the gain in sales represented higher prices. After having made a marked advance in the latter part of 1958, the underlying trend in retail sales in 1959, apart from seasonal and irregular fluctuations, was gently upward throughout the year.

The course of economic events in 1959 is described in detail in the article "National Accounts, Income and Expenditure, Fourth Quarter and Preliminary Annual, 1959" published in the March issue of the Canadian Statistical Review. Briefly, the year was one of continuing recovery from a mild recession. A large part of the resurgence in demand came from the replenishment of business inventories (including inventories of retail outlets), which had been drawn down the previous year. Some increase in the rate of consumer spending was an important additional source of strength; the rise in consumer spending matched fairly closely the rise in disposable income, leaving a rate of personal saving that continued to be fairly high by the standards of most post-war years. Expenditures for housing, which are closely related to the consumer sector, remained unchanged in 1959, although housing starts fell well below the extremely high level of 1958. The progress of recovery at home brought an upsurge in imports, including imports of consumer goods. Production, employment and important income aggregates were all responding to generally expansionary influences.

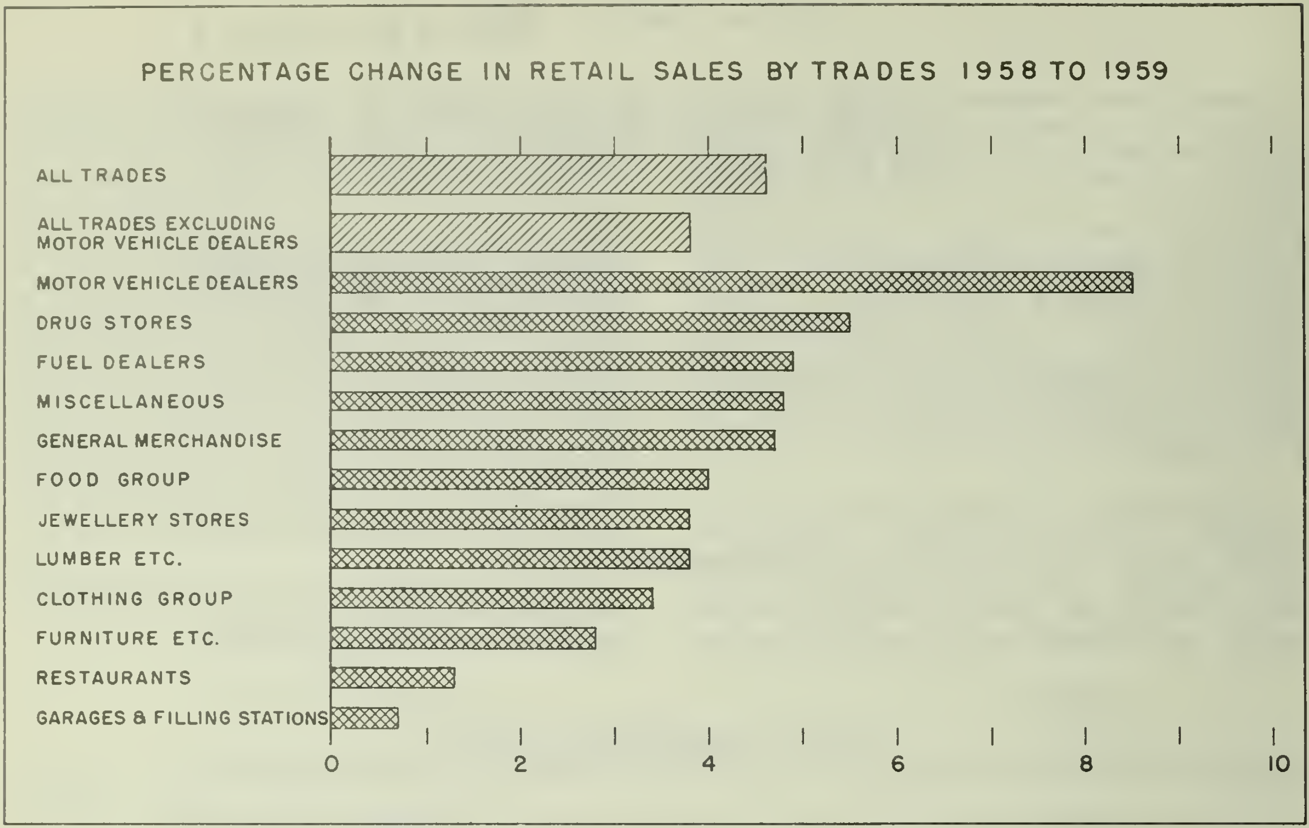
The accompanying table shows the trend of retail sales in recent years, together with the movements in a number of related series.

TABLE 1. Selected Series, 1956-59

	1956[1]	1957	1958	1959
Gross National Product at market prices	100.0	103.8	106.6	113.1
Labour income	100.0	107.4	110.4	119.0
Disposable personal income	100.0	104.7	112.4	118.4
Personal expenditure on consumer goods and services	100.0	106.0	111.7	118.2
Goods:				
Non-durable	100.0	106.4	111.5	117.1
Durable	100.0	100.0	102.8	109.3
Services	100.0	107.7	115.2	123.1
Retail sales	100.0	103.7	108.0	112.9
Retail sales (excluding motor vehicle dealers)	100.0	105.0	110.8	115.1
Consumer price index	100.0	103.2	105.9	107.1
Food component	100.0	104.6	107.7	106.8
Clothing component	100.0	99.9	101.0	101.2

[1] All indices mechanically converted to a common base.

All trades shared at least to some extent in the advance in retail sales in 1959, as is indicated in the chart. The largest gains were in the durable goods group where sales rose about 7 per cent, compared with about 4 per cent for the non-durable group. The sharp advance in sales of motor vehicle dealers was of paramount importance in accounting for this difference. Better than average gains also occurred in sales of drug stores, fuel dealers, miscellaneous retail dealers and the general merchandise group, which includes department stores, general stores and variety stores.



PERCENTAGE CHANGE IN RETAIL SALES BY TRADES 1958 TO 1959

Sales in the food group, which account for nearly 40 per cent of sales in the non-durable group, rose 4 per cent in 1959, a considerably smaller increase than in recent years. However, prices of food at retail eased a little, after having risen appreciably in the two preceding years, particularly in 1957. When the changes in prices are taken into account, the gains in the volume of sales by this group were slightly in excess of the gains in the two preceding years. While no retail trade statistics are available to measure these changes, two readily observable tendencies in contemporary merchandising practice have made for steady increases in sales by the food group, namely a growing stock of processed and therefore higher priced foods and a widening variety of non-food items.

Sales by the clothing group rose by about 3½ per cent in 1959, much the same rate of increase as in 1958 and exceeding slightly the rate of increase recorded in 1957. The clothing component of the consumer price index remained unchanged in 1959 so that the advance in sales represented an equivalent increase in real purchasing. In 1959, as in the two previous years, the rise in sales of shoe stores was large relative to the other types of apparel stores, reflecting the continuing upward trend in prices of footwear.

Sales by restaurants were up about 1 per cent, a considerably smaller rate of increase than occurred in preceding years. This development is presumably related in part to the easing in food prices in 1959, in contrast to the previous rising trend.

Among the non-durables, sales of drug stores continued to make relatively large gains. The rise of 5½ per cent in 1959 compares with 7 and 9 per cent in 1958 and 1957 respectively. The value of sales in 1959, as in preceding years, contains a significant element of price increase.

The 1 per cent increase in sales of garages and filling stations in 1959 is much the smallest in recent years. This preliminary estimate may be raised when the effect of "births" and "deaths" of retail outlets is taken into account. In this field of distribution the adjustment on account of entries and withdrawals is relatively large and usually positive.

Sales of fuel dealers rose about 5 per cent in 1959, a considerably higher rate of increase than in 1958. Year-to-year changes in this series are affected by the weather, and recently the growing use of natural gas for heating purposes (not included in retail sales) has cut into sales of the more traditional types of fuel.

TABLE 2. Retail Sales by Trades, 1955 - 59

	1955	1956	1957	1958	1959	Percent change from previous year

Total — All trades	**13,112**	**14,298**	**14,826**	**15,444**	**16,149**	**9.0**	**3.7**	**4.2**	**4.6**
Total — All trades excluding motor vehicle dealers	10,742	11,756	12,343	13,030	13,529	9.4	5.0	5.6	3.8

[1] Totals include items not shown separately.

[2] Department stores, general stores and variety stores.

Note: Details will not add to totals because of rounding.

Turning to consider the durables, the 7 per cent increase for the group as a whole was the result of higher sales values for all the trades. Motor vehicle dealers, accounting for close to half the sales of the group, increased their sales by 8½ per cent, following two years of moderately declining sales. The value of sales in 1959 was somewhat higher than in 1956, the previous peak year. The gain in sales of new passenger cars was 11 per cent in value, compared with 2 per cent in 1958 and a decline of 4 per cent in 1957. A notable development of the year was the very sharp advance in sales of British and European type cars which rose 45 per cent, and accounted for 18 per cent of the value of all passenger car sales. Sales of commercial vehicles rose 17 per cent in 1959, after having declined sharply in the two previous years. Sales of used vehicles by motor vehicle dealers were somewhat higher than in 1958. Prices of motor vehicles continued to rise, but much more moderately than in 1957 and 1958.

The upward trend of sales of furniture, appliances and radio dealers was resumed in 1959, with an increase of about 3 per cent, bringing them almost back to the peak level of 1956. Jewellery stores increased their sales by about 4 per cent, following a much more moderate gain in 1958 and no change in 1957. Sales of the lumber building and hardware group also rose about 4 per cent, a smaller increase than in 1958.

Among the general merchandise establishments, the persisting upward trend raised sales of department stores about 5½ per cent in 1959, a moderately higher rate of increase than in the two preceding years, and bringing them about 14 per cent above the level of 1956. Almost all departments increased their sales in 1959, some of the highest rates of gain being in departments selling household effects. Thus sales of china and glassware were up 10 per cent, of major appliances 9½ per cent, and of hardware and housewares 8 per cent. Other departments making notably large gains were photographic equipment and supplies, 13 per cent, and radios and music whose sales were up 11 per cent. The ratio of department store stocks to sales at the end of the year was somewhat higher than at the end of 1958.

Sales of chain stores were up about 6½ per cent in 1959, a fairly small rate of increase in terms of the experience of recent years. All types of chain stores recorded gains, ranging from 3 per cent in the furniture, appliance and radio group to 9 per cent in family clothing and shoe stores. Grocery and combination stores, whose sales constitute about 45 per cent of the chain store total, increased their sales by 7 per cent. As in the case of department stores, the ratio of stocks to sales in chain stores at the end of 1959 was somewhat higher than a year earlier.

As is usual in periods of heavy purchasing of durable goods, consumer credit outstanding expanded sharply in 1959. The accompanying table shows selected items of consumer credit. At the end of the year, the total of consumer credit outstanding under the selected headings amounted to $2,970 million, an increase of $330 million or 12½ per cent from a year earlier which compares with the much larger rate of increase of 20 per cent in 1955. About half the increase in 1959 was in the unsecured personal loans of the chartered banks.

TABLE 3. Consumer Credit Outstanding – Selected Items 1954 - 59[1]

STATISTICS OF EDUCATION

Under Section 33 of the Statistics Act, 1918, the D.B.S. is empowered to collect, compile, analyse, abstract and publish statistics of public and private elementary and secondary schools, vocational institutes and trade schools, colleges and universities, libraries and museums and adult education activities. The principal data collected and reported annually cover the number and types of establishments; numbers, salaries and qualifications of staff members; numbers, levels and activities of those enrolled; and revenues and expenditures. Essentially the Education Division provides quantitative and other factual information in suitable publications and assists other agencies such as Unesco, to prepare their publications.

To perform its functions the Education Division is organized in five sections: Elementary and Secondary, comprised of schools and finance units; Higher Education; Vocational Education; Adult Education, Museums and Libraries; and Research and Development.

Rapidly increasing enrolments, demands for more accommodation and many more qualified teachers, combined with rapidly increasing costs have greatly increased the demands for additional series and for more timely statistics. To meet these demands insofar as possible most of the reports have been overhauled and new ones have been established. Considerable effort has been brought to bear on the problem of publishing current statistics and present coverage is being carefully scrutinized and altered to meet current needs.

Although statistics of education are predominantly social rather than economic, the economic importance of each series must be recognized when it is realized that the expenditure on education in 1958 for all Canada was $1,150,000,000. Expenditure on education accounts for 26 per cent of funds raised at the municipal level, 23 per cent of funds raised by the province, and 3 per cent of the federal budget.

Schools and Teachers

Data on publicly-controlled schools has always been obtained from the provincial Departments of Education. Each Department collects information from the schools and publishes an annual report with information on teachers and pupils, etc. Many of the forms used are designed co-operatively by the D.B.S. and provincial Departments to ensure some degree of uniformity in reporting across Canada.

These forms provide data for the use of both the province and the D.B.S. and may be compiled by either the province or the D.B.S. or by both. At present,a fall report form provides data on enrolment and on teachers' qualifications and salaries; and an end-of-the-year report gives data on schools and pupils by age, grade, subjects studied in high school, and certificate, experience and tenure for teachers.

Data for private schools is in most provinces obtained directly from the schools by D.B.S. but two Departments of Education collect data on forms prepared by the D.B.S. Information obtained is similar to that shown for public schools.

Universities and Colleges

Annual returns, obtained directly from universities and colleges, are incorporated in the Survey of Higher Education. Tables show full-time undergraduate and graduate students of university grade by province and faculty, part-time and short course students by grade of work, degrees and diplomas granted. Trends are indicated by retrospective tables on enrolment by faculties, degrees and diplomas granted, teaching staffs and finances. A bibliography of articles and publications is given.

Salaries and Qualifications of Teachers in Universities and Colleges gives distributions of salaries for deans, professors and instructors according to field, geographic region, size of institution, faculty, subject, and highest degree obtained and experience. Other publications include *Canadian Institutions of Higher Education* giving name, address, courses offered, requirements and fees, *University Entrance Awards* and *Awards for Graduate Study and Research* and *Fall Enrolment in Universities and Colleges.*

Vocational Education

In 1958-59 the chief of the Vocational Education Section co-operated with the Canadian Vocational Training Branch, Department of Labour to produce *Vocational Training Program in Canada, A. – Technical and Trade Training, Publicly-Operated; B. – Commercial, Home Economics, Art, Service Trades, Fishing, Forestry, Landscaping, Marine Engineering and Navigation, Publicly-Operated; C. – Vocational Education in Agriculture.* The information and series designed for these reports will be continued in D.B.S. publications from 1960 on, and additional publications on privately-operated vocational and trade schools will be produced annually. Series on private business colleges have been published for many years and will be continued.

Adult Education and Libraries

Biennial surveys of libraries were issued from 1931 to 1957 when the series was put on an annual basis. The 1957-58 survey reports on 1,459 public libraries, including 132 urban libraries in centres of 10,000 and over, 37 regional, co-operative, travelling and open shelf libraries, and data for 32 university and college libraries.

The first report covering adult education conducted by universities, Departments of Education and school boards of cities of 10,000 and over covered the year 1950-51. The first of an annual series will be issued in 1960 and it is planned that the scope, which is similar to that of the 1950-51 series, will be increased from time to time to cover other areas which contribute to adult education.

Research and Development

The Research Section undertakes surveys and studies in one or more of the fields of education of interest to Canadians generally or to educational or other organizations. Among the topics reported on to date are the following. *Statistical Review of Canadian Education, Census 1951.* Each decennial census includes questions on education from which data are obtained on years of schooling and attendance at school which can be related to other census data on occupations and industries, country of origin, age, etc. Some of these data act as a check on figures obtained otherwise; the others provide information not available elsewhere. *A Bibliographical Guide to Canadian Education, University Student Expenditure and Income in Canada, 1956-57* and a report on *The Organization and Administration of Public Schools in Canada, 1960* are among the publications released.

Uses of Education Statistics

Statistics of education are used by several departments of the federal and provincial governments and many municipal governments; by associations of parents, teachers and trustees; by business firms, and by research students and writers. Increased interest has followed from increased automation, greater urbanization, as well as from a surge of new entrants from elementary schools up and now in the universities, with consequently greater demands on high schools and universities. Data produced by the D.B.S. is used in forecasting the numbers likely to be enrolled during the next 10 or 20 years and the number of professors and teachers needed, the number of new or enlarged institutions and roughly the amount of money needed for current expenditure and capital outlay.

An interest in available manpower related to education level is of particular interest to the Department of National Defence, the Department of Labour and the National Employment Service as well as industrial firms. Data on the numbers receiving trade, technical and professional training is a necessary adjunct to this information considering the well-being of the nation and staffing of the armed forces.

Data showing the number of full-time students of university grade are collected and used as a basis for computing federal grants to universities, allocated to the provinces by the Department of Finance and at present distributed by the Canadian University Foundation.

Provincial Departments of Education are in constant need of more factual information as policies are appraised and usually revised only after consideration of statistical data. Data on teachers' salaries and qualifications, losses to the profession and present and future supply, are in constant demand. Increased operating costs and stepped-up building programs whether due to increased enrolment, higher salaries and other costs, affect provincial budgets and grants.

At the municipal level, more detailed statistics on teachers, pupils and finances are equally important in the administration of education. Here authorities carefully watch increases in costs, insurance, pensions, special education, evening courses, and salary schedules. Comparative data from other municipalities and provinces are used in the formulation of policy.

Business firms use these statistics for consideration of labour supply and markets; publishing firms and supply houses are more interested in relating these data to market potentialities.

Professors, students in research, and writers use education statistics as source material for a variety of topics and guidance personnel use the data in assessing trends and in advising clients.

Teachers' associations make use of data on training of teachers, teaching load, salaries, tenure and experience, while trustee associations use information related to costs, educational trends, teacher qualifications, teacher supply and demand and forecasts of needs in planning for the future. Statistics of age-grade placement, pupil progress, teacher training and qualifications and school finances are of interest to parent groups.

An increased interest in comparative education requires that comparable education statistics be prepared for all Canada and that both historic and current data be provided for Unesco and a number of international yearbooks, the Departments of External Affairs and Trade and Commerce. Interest in Canadian high schools, colleges and universities is on the increase, and the number of requests for such information from outside the country is indicative of increasing international interest.

INDUSTRIAL PRODUCTION

The index of industrial production declined in February, reflecting declines in both durable and non-durable manufacturing production.

(2) Seasonally adjusted at annual rates.

(3) Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT AND HOURS WORKED

The composite industrial employment index was relatively unchanged in February, remaining at the level prevailing at the latter part of 1959. However, the construction index was down considerably from the level attained early last fall.

(1)Averages of unadjusted data. (2)Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

•The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D., or months for cyclical dominance.

RETAIL TRADE (concluded)

Sales of new passenger cars were up sharply in February, continuing the advance of the preceding month.

(2) Includes "Men's Clothing", "Family Clothing", and "Women's Clothing".

CONSTRUCTION

Housing starts declined in February for the fourth consecutive month. Completions in February were also down.

Commercial building permits declined again in February, continuing the general trend which has been downward since mid 1959.

---

(1)"De facto" population. Annual data are for June. (2)At current market prices. Annual data are totals of the four quarters. (3)Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4)All manufactured products. (5)Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates. (6)Annual data are for June.

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1)Not applicable to figures on population and immigration. (2)Yukon and North-West Territories not included in figures for births, marriages and deaths. (3)Estimates are given by years as of June 1 and by quarters for Canada. (4)Exclusive of stillbirths. (5)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

Note: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926–1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

[1] The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. [2] Includes adjusting entry. [3] Includes residual error of estimate. [4] This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. [5] Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see **D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."**

[1]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

(1) Seasonal (formerly supplementary) benefit data included. (2) On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. (3) The number of new cases of recorded unemployment among insured persons. (4) Estimates are based on average weekly number of payments. (5) The number of calendar weeks during which a benefit payment was made. (6) Revised to relate to the Thursday nearest to the last day of the month. (7) Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957–June 1958 which included fishing claimants. **Source: Unemployment Insurance Commission and monthly reports of Unemployment Insurance Branch, D.B.S.**

(1) The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(2) The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1)These totals include all generating agencies producing over ten million kilowatt hours per year. (2)These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. (3)Less imports. (4)Total net generation less net exports. (5)Mainly the amount used in electric boilers. **Source: Monthly Report, Electric Power Statistics, D.B.S.**

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. (3)Customs exports. (4)Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(1) Shipments for further processing within own firm and for sale in Canada.

(2) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1) Includes some silvery pig iron formerly included with ferro-alloys. (2) Excluding shipments for processing. (3) Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. (4) Monthly average. (5) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. (1)Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. **Source: Building Permits, Business Finance Division. D.B.S.**

(1)The coverage was extended to 507 municipalities in 1948, and as of 1959 ,stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Planks and boards, flooring and square timber. (3)Hollow blocks including fireproofing and load-bearing tile. (4)For building insulation only. (5)Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6)Includes concrete chimney blocks. (7)Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. (1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 include final payments for all grains. From August, 1958 to July 1959, western wheat prices are initial plus interim payments. Since August 1, 1959, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Livestock and Meat Trade Report, Dept. of Agriculture, Coarse Grains Quarterly, Cold Storage Holdings, and Index Numbers of Farm Prices of Agricultural Products, D.B.S.**

(1)Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. (2) Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. (3)Annual data are monthly averages of crop year. (4)Includes eggs for hatching.

---

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1)Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2)Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3)Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4)In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1958-31
Sept. 1958-39
Dec. 1958-35
Mar. 1959-32
June, 1959-36
Sept. 1959-44
Dec. 1959-40

(5)Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. (6)Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1) Does not include re-exports. (2) As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately $2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960. (3) As from January 1958, includes square timber, formerly included with "Other wood and paper." (4) As from January 1958, excludes square timber, now included with "Lumber and timber." (5) Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

Source: Trade of Canada, D.B.S.

---

(1)As from January 1958 the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. In this issue, the indexes are still based on our previous figures. For a more detailed explanation see Trade of Canada (Exports) 1960.

(2)Includes pigs, ingots, blooms and billets, casting and forgings, ferro-alloys and rolling mill products.

Source: Trade of Canada, D.B.S.

(1)Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1958 and 1959 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2)As of January, 1958, statistics include the British Columbia Electric Railway. (3)As of January, 1958, the Hudson Bay Railwav has been absorbed into the Canadian National Railway system. **Source: Railway Operating Statistics, D.B.S.**

(1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)Mainly deposits of foreign banks. (3)Capital, rest fund and undivided profits as at the latest fiscal year-end. (4)Including issues payable in foreign currency. (5)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (6)Excluding Canadian day to day loans. (7)Loans to grain dealers and exporters. (8)Loans to finance purchase of Canada Savings bonds at time of issue. (9)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (10)Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. (2) Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. (3) Less total float, i.e. cheques and other items in transit (net). (4) At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

[1] The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

(2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(3) Includes Printing and Publishing and Allied Industries.

Canadian Agriculture . . . . . .

YESTERDAY . . . . The Census of New France in 1667 recorded a population of 3,918 whites (668 families), having 11,448 arpents under cultivation with 3,107 cattle and 85 sheep.

TODAY . . . . The 1956 Census recorded a population of 16,080,791 and 3,711,500 families with 2,746,755 persons living on 575,015 farms having an area of 173,923,691 acres, and livestock population of 11,019,403 cattle, 784,018 horses, 4,732,799 pigs, 1,638,194 sheep and 73,160,368 poultry.

Statistics on farming were essential to determine the progress of the young colony. Today agriculture is a far-reaching and complex industry and there is constant need for statistical data on its many phases.

DBS conducts 5- and 10-year censuses of agriculture which provide a detailed picture of the development of the industry.

DBS publishes a wide range of current information on production, value and disposition of field and special crops, livestock, dairying, fur farms; and on farm cash and net income, farm wages and prices of agricultural products.

DBS data on agriculture are essential to planning in the industry and in many other fields and are used extensively by governments, farmers and farm organizations, food packers and processors, storage warehouses, wholesalers and retailers, transportation services, consumers, exporters and importers, manufacturers of farm implements and fertilizers, banks and other lending agencies.

A full list of DBS publications on Agriculture and other aspects of the Canadian economy is contained in the Catalogue of Current Publications 1959. Write for a free copy to: Information Services Division, Dominion Bureau of Statistics, Ottawa.

THE QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1960

RECENT ECONOMIC DEVELOPMENTS IN THE UNITED STATES AND CANADA

When operations were resumed in the United States' steel mills early last November, following the long-drawn out work stoppage in the industry, there was an immediate upsurge in economic activity, carrying many important monthly economic indicators to new highs. This development was in accordance with past experience in post-strike periods and in keeping with the anticipations of most observers, some of whom expected that the re-building of depleted stocks would be a powerful stimulus to the economy for some time to come. By the end of the first quarter it was apparent that these expectations had not been realized. The rate of inventory accumulation dropped during the course of the quarter, retail sales proved disappointing and industrial production eased slightly. The Gross National Product of $500.2 billion was up 3.5 per cent from the fourth quarter but in terms of constant dollars was only 1.7 per cent above pre-strike levels. It has, of course, to be recognized that the level of activity in the second quarter of 1959 was unusually high by reason of the accumulation of stocks in anticipation of the stoppage of production in steel as well as in the non-ferrous metal industries. Economic indicators now available into the second quarter show conflicting tendencies, with some quickening in activity in certain sectors, notably retail sales and the automotive industry, and some falling off in activity in other sectors, notably in the steel industry.

In Canada, as in the United States, the level of activity in the second half of 1959 had been affected by industrial disputes, directly, in the third quarter by the strike in the forest industry in British Columbia, and indirectly, in the fourth quarter, by the deficiency in supplies of steel imported from the United States. In Canada, likewise, industrial production receded from its January high during the course of the first quarter; retail sales were somewhat lower than in the preceding quarter, on a seasonally adjusted basis. However, merchandise exports continued to testify to the strength of international demand for Canadian export products and although merchandise imports were moving up, support came from the external sector. As in the United States, employment showed no clear rising trend. Estimates of the economy's performance in terms of comprehensive aggregates are not yet available but it is apparent from scattered evidence that there were conflicting and partially offsetting trends within the first quarter.

In both countries, forecasts of capital investment for 1960 had pointed to an increase in outlays for plant and equipment, more pronounced in the United States than in Canada, and a partially offsetting decline in outlays for housing. In the United States, the forecast of capital expenditures for plant and equipment was reviewed in the spring and the earlier estimates raised slightly. In that country, surveys of consumer intentions to spend also testify to confidence and suggest a considerable increase in consumer outlays.

The purpose of this article, which brings up to date a previous article published in the "Canadian Statistical Review" last October, is to review and compare economic developments thus far in the year in the two economies, and to consider recent performance in the light of surveys of plans, intentions or anticipations.

Production and Employment

After the initial pick-up at the turn of the year, production in both countries showed mixed and largely offsetting trends during the opening months of 1960, when seasonal factors are taken into account, as is shown in Table 1.

TABLE 1. Index of Industrial Production — United States and Canada

(Seasonally adjusted)

	1959 average	1959 peak	1960			
			January	February	March	April
Canada (1949 = 100):						
Index of industrial production	165.4	171.9	173.3	170.1	170.8	..
Manufacturing	148.9	154.8	156.5	152.3	152.5	..
Durables	149.0	157.6	157.8	152.8	153.2	..
Non-durables	148.8	152.5	155.4	151.9	151.9	..
Mining	251.6	264.1	257.1	259.4	260.0	..
Electric power and gas utilities	268.7	285.3	287.5	288.9	299.2	..
United States (1957 = 100):

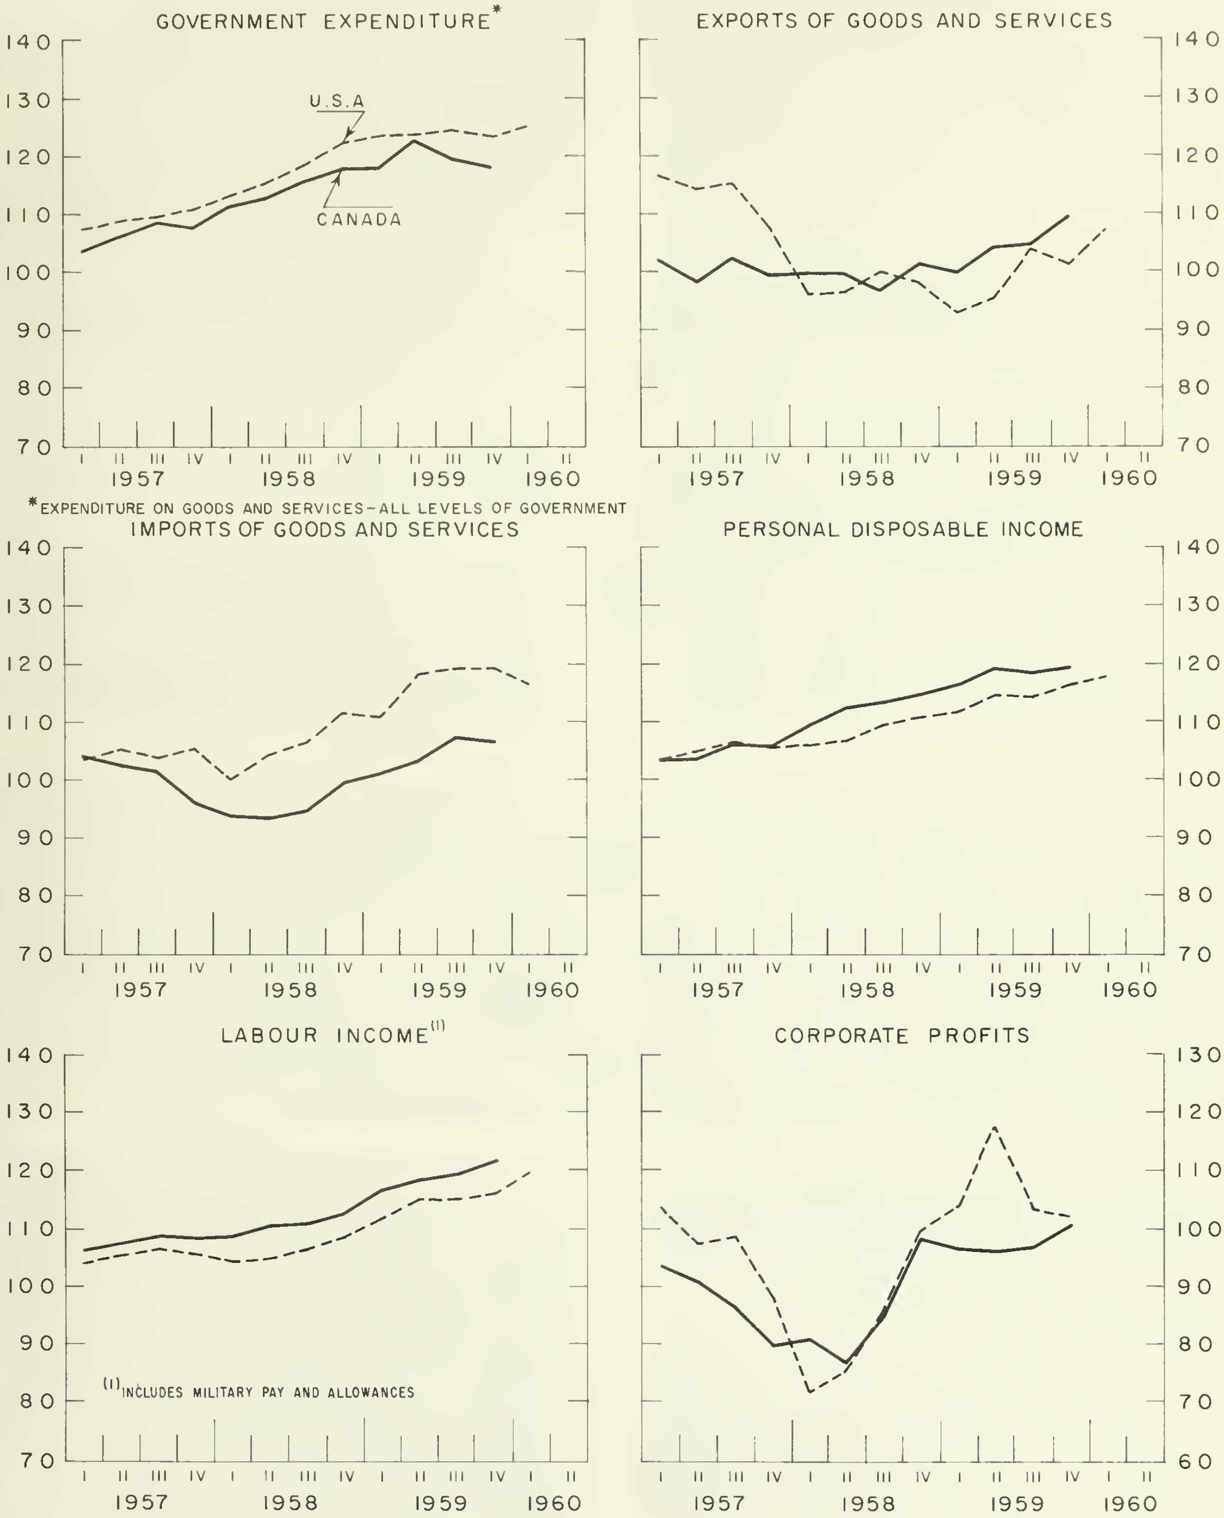
SEASONALLY ADJUSTED INDEXES 1956=100



*EXPENDITURE ON GOODS AND SERVICES–ALL LEVELS OF GOVERNMENT

(1) INCLUDES MILITARY PAY AND ALLOWANCES

Following the resumption of activity in the steel industry early in November, industrial production moved up rapidly in the United States, and by January the seasonally adjusted index stood at 111 (1957 = 100) compared with its pre-strike peak of 110 in June. During the course of the first quarter of 1960 production schedules were cut back in some industries, notably iron and steel and automobiles and the index for the quarter averaged 110, 5 per cent higher than in the preceding quarter and 1 per cent above the high second quarter of 1959. The pattern for manufacturing was virtually the same as for the total index. The manufacturing industries operating below earlier highs in the first quarter included primary metals, fabricated metals, clay, glass and lumber and aircraft and other equipment among the durable group and petroleum products and textile, apparel and other products among the non-durables. In April, when an increase in output of consumer goods offset further declines elsewhere, the index stood at 109, the same as in the previous month. There was a notable increase in automotive output and schedules for May indicated further gains.

The cut-backs in the automotive and steel industries during the first quarter should be seen in the perspective of the quarter's total performance. The automotive industry turned out 2.3 million passenger cars and trucks, about the same as in the like period of 1955, and about 20 per cent higher than a year earlier. Without a corresponding rise in sales of new passenger cars, stocks accumulated in dealers hands and were at a record high for that time of year by the end of March.

During the quarter the United States steel industry produced 3 per cent more ingots and castings than in the previous quarterly peak output in the second quarter of last year. The automotive industry, which takes more than 20 per cent of the steel industry's output, was buying steel at record rates, well in excess of its takings in 1955 when automotive production was at an all-time high. Furthermore, the compact car, which now accounts for about 20 per cent of the market, uses 25 per cent less steel than standard models. The steel operating rate, which was 96 per cent in January, had fallen to 91 per cent in March, to 75 per cent early in May, and was still trending downward at time of writing.

Production of consumer durables other than automobiles in the United States was down in the first quarter (after seasonal adjustment) from the high rates in the closing quarter of 1959, presumably reflecting the declining trend of sales around the turn of the year.

Industrial production in Canada, adversely affected in the latter half of 1959 by the prolonged strike in the woods industry in British Columbia and then by cut-backs in production in the automotive industry (a result of the interruption in supplies of steel from the United States) rose at the turn of the year, reaching 173.3 (1949 = 100) in January. It eased in February and rose a little in March when it stood at 170.8. This slight decline is attributable to manufacturing; some easing was apparent in both durables and non-durables. The index for the first quarter was about 1 per cent above the fourth quarter and about 6 per cent above the like period of 1959. The gains from the fourth quarter were in manufacturing, both durable and non-durable, and electricity and gas; mining production was down about 1 per cent. By comparison with the like period of 1959, all the main components show significant gains of almost 6 to 7 per cent in manufacturing and mining and of 13 per cent in electricity and gas.

In the United States, seasonally adjusted employment continued to rise after the settlement of the steel strike until March, when it receded a little. This decline in employment may be attributable to the heavy snowstorms that occurred in many parts of the country. That seasonally adjusted figures rose again in April and that the rate of unemployment fell to 5.0 per cent of the labour force, after having been 5.4 per cent in March and 4.8 per cent in February, lends some support to this explanation. However, employment indicators were not uniformly favourable in April; employment eased more than seasonally in a number of durable goods industries, namely primary and fabricated metals, electrical and non-electrical machinery and transportation equipment, and hours of work in manufacturing, usually regarded as a sensitive indicator, continued to fall. To put recent rates of unemployment in perspective, it may be noted that in peacetime years since the end of the Second World War, which includes three recessions, unemployment averaged about 4.8 per cent of the labour force.

In Canada the seasonally adjusted month-to-month changes in employment in the first quarter were all positive though small. The number of persons without jobs and seeking work averaged 5.7 per cent of the labour force, compared with 6.0 per cent a year earlier. Manufacturing employment, in the first quarter, showed little other than the usual seasonal change, with a slightly firmer trend in durables than in non-durables. Hours of work in manufacturing eased a little in February.

The Investment Sector

Private capital expenditures recovered earlier and more vigorously in the United States than they did in Canada during the recent expansion. The down-trend in the United States was reversed in the third quarter of 1958 and by the closing quarter of 1959 the seasonally adjusted rate had advanced 17 per cent from its recession low. The reversal in Canada did not come until the second quarter of 1959 and by the closing quarter the seasonally adjusted rate had risen only about 5 per cent. These differences are largely accounted for by the divergent behaviour of housing in the two countries; housing advanced earlier in Canada than in the United States and also contracted earlier, thus tending to bring the movements in total private capital investment in the two countries more closely into line in the latter part of 1959.

Surveys of investment intentions for 1960 will, if realized, make for a considerably higher rate of increase in the United States than in Canada, as is shown in Table 2. The report "Business Anticipations of Plant and Equipment Expenditures in 1960", prepared by the Department of Commerce and the Security and Exchange Commission indicates a planned increase in outlays for capital investment of 14 per cent in total, with all major industries expecting to spend more in 1960 than in 1959. Outlays are expected to rise throughout the year, the implied rate for the second half of 1960 being $38 billion, compared with a seasonally adjusted annual rate of $33.5 billion in the closing quarter of 1959. Much of the anticipated strength in investment originates in manufacturing, particularly the durable segment of it. Manufacturing outlays in total are expected to rise 25 per cent, and the durable goods industries outlays by 33 per cent; these projected increases are in many instances from rather low rates and in most individual industries projected capital investment in 1960 is below the records established in 1956-57. However, new records are expected to be established in the electrical machinery and rubber, while in the steel and the stone, clay and glass industries investment in 1960 is about the same as previous peaks.

TABLE 2. Business Investment in Plant and Equipment — Actual and Anticipated, 1957-60

	1957	1958	1959	1960 anticipated	1960 anticipation as a per cent of actual investment

Totals	**36,962**	**30,526**	**32,543**	**37,016**	**100**	**121**	**114**

In order to make the Canadian and United States figures more nearly comparable, the Canadian total excludes agriculture and fishing, housing, Government Departments and municipal waterworks, and the figure for utilities excludes telephones and broadcasting, which are included with Commercial and other.

The 14 per cent planned increase in private non-farm investment outlays in 1960 in the United States compares with one of 8 per cent in Canada. Much less buoyancy is evident in the plans of Canadian manufacturing industries, whose capital outlays are expected to rise by 11 per cent. By contrast with the United States outlays by durable goods manufacturing industries are expected to rise moderately. The anticipated increase in the non-durable goods industries in Canada of 18 per cent is about the same as in the United States. In both countries, the rubber and chemical industries are sharply expanding their investment outlays and in Canada the paper industry contributes prominently to the expected increase in outlays by non-durable manufacturing industries. While in the United States all the durable manufacturing industries plan increased outlays, in Canada only the iron and steel and the electrical industries expect any significant expansion in capital expenditures.

The greater buoyancy in the investment outlook in the United States is not evident in other segments. For business other than manufacturing, expectations are that capital outlays will rise about 7 per cent in both countries. In the United States all the major industrial divisions plan to raise their outlays but in Canada the anticipated direction of change is not upward in all instances.

In the United States the survey of investment intentions is published by the Department of Commerce in conjunction with a survey of sales anticipations. The investment plans outlined above were associated with favourable sales anticipations. Manufacturers expected their sales in 1960 to be 8 per cent higher than in 1959, with an expected gain of 10 per cent in the durable lines and of 6 per cent in the non-durables; retailers and wholesalers anticipated increases of 6 and 4 per cent respectively, and public utilities a rise of 9 per cent.

A more recent survey of investment intentions in the United States, released by McGraw Hill at the end of April, suggests that plans may have been revised upward slightly since the Department of Commerce SEC survey was undertaken. The McGraw Hill Survey, which is on a somewhat different basis, shows a planned increase of 16 per cent, rather than 14 per cent. Insofar as first quarter experience of profits and sales may have been disappointing, capital spending has not been adversely affected as might have been expected in such a situation. In the 1960 programme as set out in the McGraw Hill Survey, the emphasis falls heavily on replacement and modernization. In manufacturing industries about two-thirds of planned spending is of this nature; capacity is expected to expand only about 5 per cent despite the record level of capital spending.

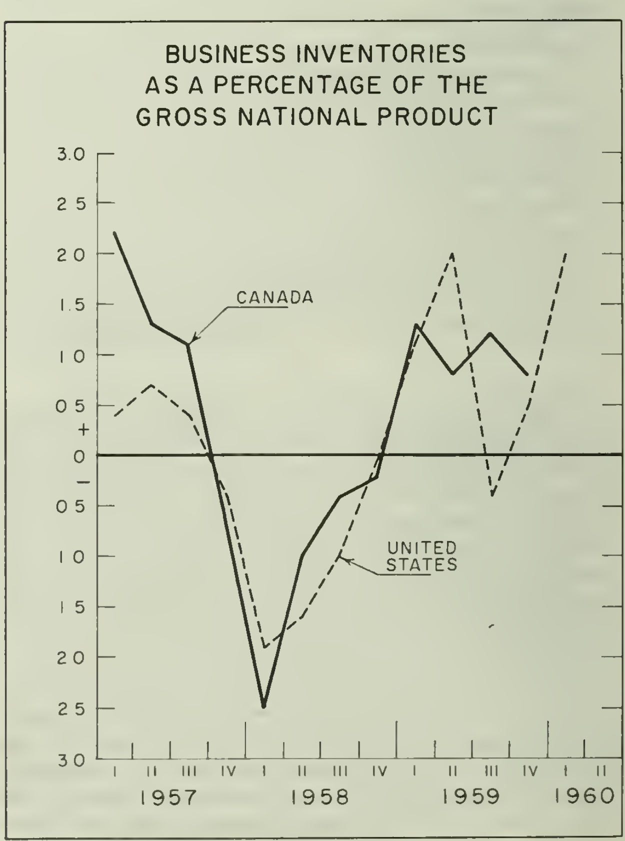
In the United States, residential construction dropped in the second half of 1959, after rising for more than a year. In the first nine months of 1959 private housing starts were above an annual rate of 1.3 million, falling to an average of 1.2 million units in the closing quarter. In December of last year the Department of Commerce estimated that expenditures for private housing construction would decline by 6 per cent in 1960, in contrast to an increase of 25 per cent in 1959; it forecast private starts of 1.2 million units in 1960, 125,000 units less than in 1959.[1] At the same time, it suggested that starts in the opening months of 1960 might be below the expected annual average in view of the tightness in mortgage money at the turn of the year. Housing starts were running at a rate of about 1.1 million units in February, March and April of this year, although there was a slight improvement from month to month during the period. The easing in money markets in recent months should improve the prospects for housing. Early in May the Federal Housing authority lowered its down-payments for houses in the middle price range. Statistics are not sufficiently current to indicate whether the recent easing in terms of purchase has stimulated house-building activity.

Likewise, in Canada, it is expected that the value of residential construction in 1960 will be below that of 1959. The report "Private and Public Investment in Canada—Outlook 1960" suggested a 10 to 15 per cent decline in starts, about the same number of completions, and a drop in value of about 4 per cent. In the first quarter, starts in municipalities of 5,000 and over were, in fact, well below any quarter of last year, on a seasonally adjusted basis. It may be noted that Central Mortgage and Housing Corporation was not accepting applications for direct loans between the months of November and April.

In both countries, anticipated expenditures for construction are expected to rise very moderately and projected dollar outlays, if realized, will do little more than cover the rise in construction costs, leaving the volume of activity much the same as in 1959. Thus the greater strength in the investment outlook in the United States is in the area of expenditures for machinery and equipment and is associated with the pronounced pick-up in investment in the durable manufacturing industries.

The Behaviour of Inventories

In the first half of 1959 in the United States, stocks were being built up as a precaution against a strike-induced interruption in the flow of supplies. In the second quarter accumulation of business inventories reached the extremely high level of $9.8 billion at a seasonally adjusted annual rate of which an estimated one-third was in holdings of steel mill products. In the third quarter stocks were being drawn down at the rate of $1.8 billion. Following the resumption of operations in the steel industry early in November, accumulation again set in and acted as a powerful stimulant to the economy at the turn of the year. For the first quarter as a whole accumulation was at an annual rate of $10.1 billion, although the rate fell during the course of the quarter.



---

[1] Construction Review, December 1959, U.S. Department of Commerce.

Recently the situation in which businessmen have made decisions about inventory policy has been one of readily available supplies, generally stable prices and high interest rates, that is to say, one which would appear to encourage businessmen to keep inventories as low as is consistent with efficient operation. It may be noted that by historical standards inventories are, in fact, low in relation to sales.

The quarterly pattern of inventory in Canada in 1959 was consistently one of accumulation, although at varying rates. For the year as a whole, the shift from liquidation of $323 million in 1958 to accumulation of $355 million in 1959 was an important expansionary element and accounted for almost one-third of the $2.0 billion increase in Gross National Product. However, the building up of stocks did not keep pace with the growth in sales and ratios of stocks to shipments fell significantly between the two years. Indications are that stocks continued to accumulate in the first quarter of 1960 at a considerably higher rate than in the closing quarter of 1959. The accumulation was concentrated in retail trade and in the stocks of motor vehicle dealers in particular.

The Consumer Sector

In 1959, unlike 1958, the broad influences brought to bear on the consumer sector were much the same in the two countries. Disposable consumer income rose at about the same rate, as did labour income, reflecting higher employment and earnings, and the rising trend of consumer prices moderated. Consumer expenditure rose more or less in line with income and there was a considerable expansion in consumer credit outstanding. The notable difference in behaviour in the consumer sector was in sales of durables; the rate of increase in purchases of durables of nearly 15 per cent in the United States was more than twice as high as in Canada. This sharp increase in sales of durables in the United States in 1959 followed a significant decline in the preceding year. The contrasts and similarities between Canadian and United States experienced in 1958 and 1959 are apparent in Table 3.

TABLE 3. Personal Income and Expenditure – Canada and the United States, 1958 and 1959

	Per cent change from previous year			
	Canada		United States	
	1958	1959	1958	1959
Disposable personal income	7.3	5.3	2.8	5.7
Labour income[1]	2.8	7.6	0.4	7.7
Transfer payments	27.3	4.9	20.3	2.7
Personal expenditure	5.4	5.8	2.9	6.3
Non-durables	4.8	5.0	3.1	4.2
Durables	2.8	6.3	−6.7	14.4
Services	7.1	6.8	6.3	6.4

[1] Includes military pay and allowances.

The timing of purchases of durables is affected by factors other than income. For example, purchases of household appliances appear to be related to the level of housing construction and purchases of automobiles reflect public attitudes toward new models. The existing stock of durables and its age composition is obviously also important, as is the availability of consumer credit. It is, therefore, not surprising that the pattern of timing should differ considerably in the two countries.

First quarter estimates for the United States show a small advance in disposable consumer income and in consumer expenditure on a seasonally adjusted basis, with gains in all the three main categories, non-durables, durables and services. The latest figures show a further gain in personal income going into the second quarter. The estimate for April is at a seasonally adjusted annual rate of $397.4 billion, an increase of $3.4 billion from the March estimate. The greater part of this gain reflects higher labour income.

In the first quarter of 1960, retail sales in the United States were running at a rate of $18.2 billion, about 2 per cent higher than in the closing quarter of 1959 but somewhat below the peak month rate of $18.3 billion recorded in July and October of 1959. The trend of retail sales in the early months of the year proved disappointing to many observers and was admittedly difficult to interpret because of the unusually severe winter weather and the late date of Easter. The coming of spring brought a distinct pick-up in sales. In the six weeks preceding Easter, department store sales were 11 per cent higher than in the same period a year earlier which seems to confirm the view that the weather and the timing of Easter accounted in part for lagging sales. Retail sales in April were at a seasonally adjusted annual rate of $18.9 billion, 3 per cent over March and 5 per cent over April of last year; for the first four months of 1960 they were 3 per cent higher than in the same period a year earlier. Statistics of department store sales, which are more current, have not shown uniformly favourable year-to-year comparisons in recent weeks.

In the important automobile market, sales in the United States also improved in the spring and by mid-April new cars were selling at a rate of 15 per cent higher than at the same date in March and also 15 per cent higher than at the same period of 1959. In the first four months of 1960, sales of new cars were up 15 per cent from a year earlier.

These trends in sales in the United States in the early part of the year can be considered in the light of findings of the recent survey of consumer attitudes. This survey suggested that consumers' outlook was optimistic and their buying plans considerably larger than a year ago; the number of consumers intending to buy new cars was 20 per cent higher than a year earlier and plans for buying household equipment were also considerably larger.

The ratio of consumer credit to personal income has risen in the past year in the United States. At the end of March total short and intermediate term consumer credit amounted to $51.2 billion and the ratio of credit to income was well above any previous experience. The pattern of consumer credit is normally closely associated with the trend in sales of new cars and in 1959 the need for borrowed funds on the part of persons affected by work stoppages is also believed tc have been a factor.

Likewise in Canada, retail trade failed to show buoyancy in the opening months of this year and likewise this development may be associated with the timing of Easter and possibly also with the weather. Retail sales in the first quarter were barely in excess of the same period a year earlier and on a seasonally adjusted basis were 1.0 per cent below the fourth quarter. In the year-over-year comparison significant gains occurred only in the food group and in sales by drug stores. Sales were down in varying degrees in all the durable goods trades and likewise in all the apparel trades. The timing of Easter is particularly important for the latter group.

Sales by motor vehicle dealers were down about 1½ per cent. The Canadian market for new passenger cars continued to exhibit the characteristics so strikingly apparent in 1959 when total sales had risen 12 per cent and sales of British and European models by more than 45 per cent; in the first quarter total sales were up about 4.5 per cent and sales of the British and European type were up about 25 per cent, compared with the same period a year ago.

Consumer debt in Canada, as in the United States, rose considerably in the year-over-year comparison. Balances outstanding on the books of sales finance companies, predominantly associated with the financing of automobiles, were up 13 per cent at the end of March. Credit at small loan companies and accounts receivable of department stores were also considerably higher than a year earlier. There was a notable increase in the unsecured personal loans of chartered banks.

The External Sector

Reflecting the growing strength of demand in international markets, particularly in Western Europe and the United States, Canada's merchandise exports began to rise sharply in 1959 and continued to do so in the opening months of 1960. The first quarter recorded gains of 23 per cent over the same period a year earlier. All the commodity divisions shared in the advance, prominent among them being a more than 50 per cent increase in exports of non-ferrous metals and products and of about 16 per cent in chemicals and allied products and of 16 per cent in wood, wood products and paper. The increase in sales to Western Europe amounted to 32 per cent and in sales to the United States 18 per cent; there were some offsetting declines in sales to some other areas.

Preliminary estimates of Canada's merchandise imports for the first quarter of 1960 continue to show the rising trend apparent during most of 1959. However, the gain of 9 per cent was moderate by comparison with the rise in merchandise exports and the deficit on commodity account was reduced to $38.7 million from $166.2 million in the same period a year ago.

In the United States, as in Canada, exports were responding to the generally favourable climate for international trade in the opening months of the year. In the first quarter merchandise exports were up 20 per cent from the same period a year ago. Whereas in Canada the recent improvement in exports has raised them well above previous peaks, in the United States the first quarter rate of about $18.0 billion is still well below the extraordinarily high levels of 1957 when they rose to $19.5 billion, partly as a consequence of the Suez crisis. Moreover, some of the recent gains in exports reflect special or temporary factors, as in the case of cotton and aircraft. The incomplete evidence now available on the first quarter suggests that merchandise imports also rose but much less than exports.

The deterioration in the United States' balance of payments in recent years has given rise to some concern in official quarters. The excess of exports of goods and services over imports of goods and services, at its post-war peak of $5.8 billion in 1957, fell to $2.2 billion in 1958, and in 1959, when the steel strike temporarily depressed exports and stimulated imports, payments exceeded receipts by $.1 billion. Indications are that in the first quarter of 1960 the excess of receipts over payments may have been of the order of $1.0 billion at annual rates, thus bringing to bear a positive influence on the economy in place of the negative effect of current international transactions in 1959.

Conclusion

In summing up economic events in the opening months in Canada and the United States, it is apparent that somewhat similar forces have been at work in both countries, but not in the same degree. A resurgence of business investment in plant and equipment is common to both, but is more pronounced in the United States than in Canada. Temporarily, at least, the level of housing starts is low in both countries, especially in Canada judging by the standards of recent years. The expansionary influences that come from the building up of business inventories has weakened, particularly in the United States. Consumer behaviour as evidenced by retail sales is difficult to evaluate; it is worth noting, however, that important elements of personal income continued to rise and were well ahead of a year ago. Strength has been present in the external sector, especially in Canada, where international trade plays a much more important role than it does in the United States. Meanwhile, these conflicting and largely offsetting trends are reflected in industrial production and in important areas of employment.

INDUSTRIAL PRODUCTION

The index of industrial production rose fractionally in March, with the major advance in output of electricity and gas; mining and manufacturing production were little changed.

EMPLOYMENT AND HOURS WORKED*

The composite industrial employment index edged slightly downward in March, but remained close to the levels prevailing in recent months. However, employment in building and general engineering construction declined for the third consecutive month.

Average hours worked in manufacturing declined in February for the second consecutive month.

(1) Averages of unadjusted data. (2) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D. or months for cyclical dominance.

LABOUR FORCE AND LABOUR INCOME

The total labour force remained unchanged in April, but the number of persons with jobs was fractionally lower. Persons without jobs and seeking work were a somewhat higher proportion of the total labour force.

Total labour income in March edged downward slightly.

RETAIL TRADE (concluded)

March sales of new passenger cars were off from the comparatively high February level. Fuel Dealers' sales were higher in March, as a result of the late season.

CONSTRUCTION AND BUILDING PERMITS

Housing starts and completions rose in April, following previous declines.

Commercial building permits were higher in March but the overall trend of the past few months has been downward.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates. (6) Annual data are for June.

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1)Not applicable to figures on population and immigration. (2)Yukon and North-West Territories not included in figures for births, marriages and deaths. (3)Estimates are now published quarterly following Census date, June 1, as well as for January 1 and July 1 of each year. (4)Exclusive of stillbirths. (5)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926–1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

(1)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. (2)Includes adjusting entry. (3)Includes residual error of estimate. (4)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. (5)Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see **D.B.S. Reference Paper (61-503) "Revised Index of Industrial Production, 1935-57."**

[1]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

---

*Average weekly wages and salaries.

(1) Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products. (2) Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

(1)Seasonal (formerly supplementary) benefit data included. (2)On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. (3)The number of new cases of recorded unemployment among insured persons. (4)Estimates are based on average weekly number of payments. (5)The number of calendar weeks during which a benefit payment was made. (6)Revised to relate to the Thursday nearest to the last day of the month. (7)Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957–June 1958 which included fishing claimants. **Source: Unemployment Insurance Commission and monthly reports of Unemployment Insurance Branch, D.B.S.**

(1) The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(2)The annual and monthly "all industries" totals for 1958 and 1959 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1)These totals include all generating agencies producing over ten million kilowatt hours per year. (2)These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. (3)Less imports. (4)Total net generation less net exports. (5)Mainly the amount used in electric boilers. **Source: Monthly Report, Electric Power Statistics, D.B.S.**

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. (3)Customs exports. (4)Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(1) Shipments for further processing within own firm and for sale in Canada.

(2) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

---

(1)End of period. (2)Does not include apartment-type machines. (3)Electric and other. (4)Gas types are included. (5)In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. *Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1958 and 1959 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. [1]Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. **Source: Building Permits, Business Finance Division. D.B.S.**

[1]The coverage was extended to 507 municipalities in 1948, and as of 1959 ,stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits **but a number** of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2) Planks and boards, flooring and square timber. (3) Hollow blocks including fireproofing and load-bearing tile. (4) For building insulation only. (5) Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6) Includes concrete chimney blocks. (7) Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. (1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 include final payments for all grains. From August, 1958 to July 1959, western wheat prices are initial plus interim payments. Since August 1, 1959, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Livestock and Meat Trade Report, Dept. of Agriculture, Coarse Grains Quarterly, Cold Storage Holdings, and Index Numbers of Farm Prices of Agricultural Products, D.B.S.**

(1)Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. (2) Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. (3)Annual data are monthly averages of crop year. (4)Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1)Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2)Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3)Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4)In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32	June, 1959-36	Sept. 1959-44	Dec. 1959-40

(5)Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.
(6)Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1) Does not include re-exports. (2) As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately $2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960. (3) As from January 1958, includes square timber, formerly included with "Other wood and paper." (4) As from January 1958, excludes square timber, now included with "Lumber and timber." (5) Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

(1) As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. (2) Includes pigs, ingots, blooms and billets, casting and forgings, ferro-alloys and rolling mill products.

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1958 and 1959 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] As of January, 1958, statistics include the British Columbia Electric Railway. [3] As of January, 1958, the Hudson Bay Railwav has been absorbed into the Canadian National Railway system. **Source: Railway Operating Statistics, D.B.S.**

(1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)Mainly deposits of foreign banks. (3)Capital, rest fund and undivided profits as at the latest fiscal year-end. (4)Including issues payable in foreign currency. (5)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (6)Excluding Canadian day to day loans. (7)Loans to grain dealers and exporters. (8)Loans to finance purchase of Canada Savings bonds at time of issue. (9)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (10)Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. (2) Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. (3) Less total float, i.e. cheques and other items in transit (net). (4) At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

(1)The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. (2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries. (3) Includes Printing and Publishing and Allied Industries.

You read the *Canadian Statistical Review*

You know the value of accurate facts and figures

For the exporter there is a special source—

FOREIGN TRADE— that provides him with the facts and figures that can mean more sales and larger profits. FOREIGN TRADE gives an up-to-date picture of markets abroad because its reporters are Canadian Trade Commissioners living in the countries they write about. A sample copy will give you a small idea of the variety of products and the number of markets covered in FOREIGN TRADE. Write for one to the Editor, Department of Trade and Commerce, Ottawa.

A year's subscription to FOREIGN TRADE brings you 26 issues and costs only $2.00. Use the coupon to order yours.

Supervisor of Government Publications,
The Queen's Printer,
Ottawa, Canada.

Please send me *Foreign Trade* for a year. Enclosed is my cheque/money order for $2.00 ($5.00 outside Canada) made payable to the Receiver General of Canada.

NATIONAL ACCOUNTS INCOME AND EXPENDITURE

FIRST QUARTER 1960

Introductory Review

The advance in Gross National Product moderated in the first quarter of 1960. Apart from the third quarter of last year, the increase of 1 per cent was the smallest quarter-to-quarter gain in the value of production (seasonally adjusted) since the expansion began following recovery from the 1957-1958 recession. With prices showing no overall change, the first quarter advance represents a real, though modest, gain in the physical volume of output.[1]

The less vigorous advance in Gross National Product in the first quarter was associated with a levelling off in total final purchases of goods and services (see Table, overleaf). While there was a decline in final domestic demand, external demand for Canadian export products continued to rise. All of the production gain during the quarter was represented, on balance, by a movement into inventory stocks. There was a significant increase in the rate of inventory accumulation at the retail and wholesale levels, and in livestock held on farms.

Prominent among the developments which operated to suppress the level of final demand during the quarter was a small, but unusual, decline in personal expenditure on consumer goods and services. A number of factors were associated with this drop in consumer outlays in the first quarter, among them the delayed spring weather and the late date of Easter this year. In addition, disposable income had stopped rising between the second and fourth quarter of 1959, as the effects of the work stoppage in the primary wood and wood-fabricating industries in British Columbia in the third quarter and the United States steel strike in the fourth, impeded the flow of income; higher direct personal taxes were also a factor in this development. Disposable income by the first quarter of 1960 had, in fact, risen by less than 1 per cent over the second quarter of 1959.[2] In addition, there was a small decline in the price of consumer goods between the fourth and the first quarters, so that the drop in the volume of consumer outlays was only about half as much as that indicated in the value figures. While it is clear that the retardation in the growth of consumer income and the price decline have affected the movement of the figures, it is not possible to assess the relative importance of these factors in relation to the irregular influences of a delayed spring and a late Easter this year.

A further factor contributing to the relatively unchanged level of total final purchases in the first quarter was a decline in business outlays for new plant and equipment, seasonally adjusted, following the levelling which occurred in the fourth quarter of last year. The decline was mainly in machinery and equipment investment, and reflected a reduction in outlays by the transportation industry for railway rolling stock. Non-residential construction was little changed in the quarter, and outlays for housing remained steady. However, new orders for construction goods, non-residential building permits, and shipments of construction materials showed declines during the quarter, after allowing for seasonal factors. Housing starts fell sharply during the quarter, although completions were running well above the fourth quarter level.

Other elements of final demand continued to show moderate strength during the quarter, with exports of goods and services advancing further over the fourth quarter, on a seasonally adjusted basis; and government outlays showing a small rise following two quarters of decline in the last half of 1959. The gain in exports reflected continued strength in both overseas markets and in the United States for Canadian non-ferrous metal and forest products, particularly copper, nickel, aluminum, and lumber. On a year-to-year basis, commodity exports were higher than the first quarter of 1959 by 21 per cent.

These developments in the major demand categories during the first quarter were accompanied by shifts in the composition of the income flow. With labour income rising by less than 1 per cent from the fourth quarter, profits remaining unchanged, and net income of unincorporated business enterprises reflecting a decline in retail trade, the advance in national income in the first quarter was small, amounting to about one-half of 1 per cent. This rate of growth is considerably less than that which occurred during the fourth quarter of 1959, when national income advanced by 2 per cent, and labour income showed a similar rise. The rate of advance in both personal and disposable income has also slackened in recent quarters; while the first quarter rise in these two components, amounting to about 1 per cent, was similar to that which occurred in the fourth quarter of 1959, the rates of increase are now running well below those of a year ago.

---

[1] A small part of the first quarter increase (about $50 million) represents a higher estimate of crop production in 1960, based on a calculation involving acreage intentions and 10-year average yields.

[2] A factor of some significance in the current period has been the fact that recent gains in employment have been concentrated in the service industries where wage rates tend to be lower than in the goods-producing industries. Structural changes of this nature in the composition of employment have slowed the rate of growth in labour income and this in turn may have had an effect on the level of personal expenditures.

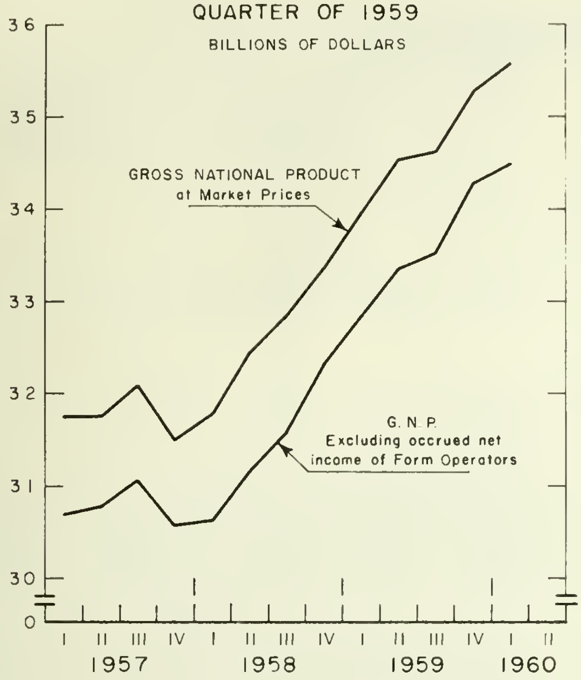
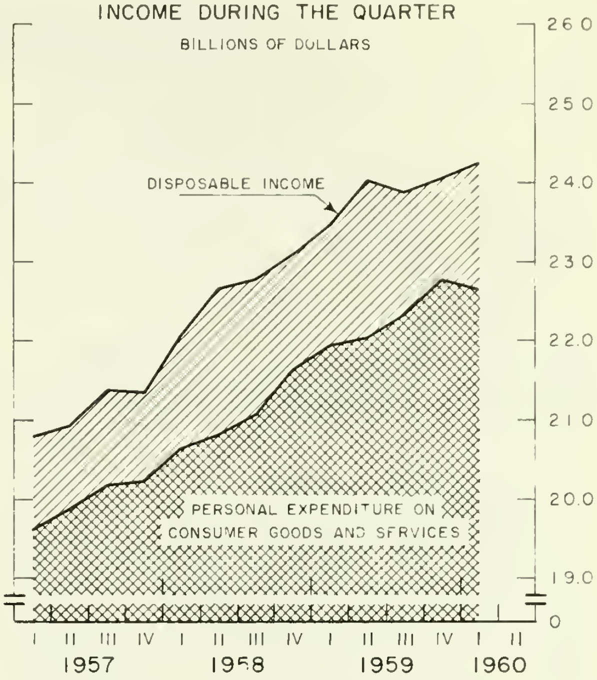
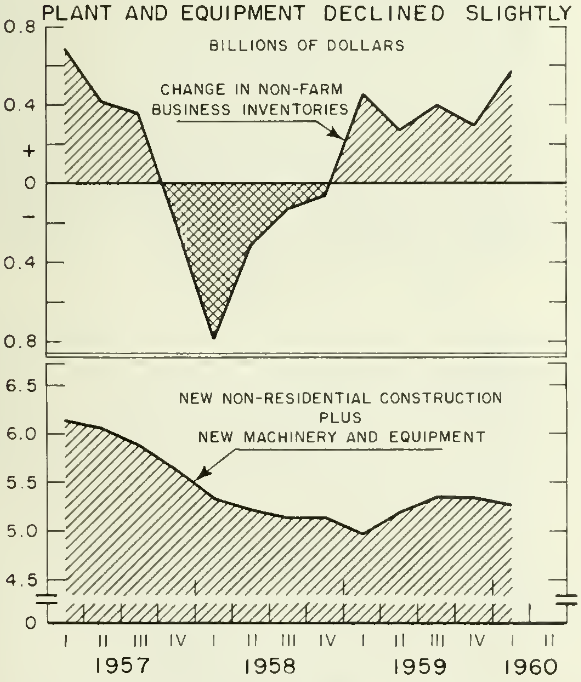
THE ADVANCE IN GROSS NATIONAL PRODUCT MODERATED IN THE FIRST QUARTER OF 1960, FOLLOWING A GAIN OF 2 PER CENT IN THE FINAL QUARTER OF 1959



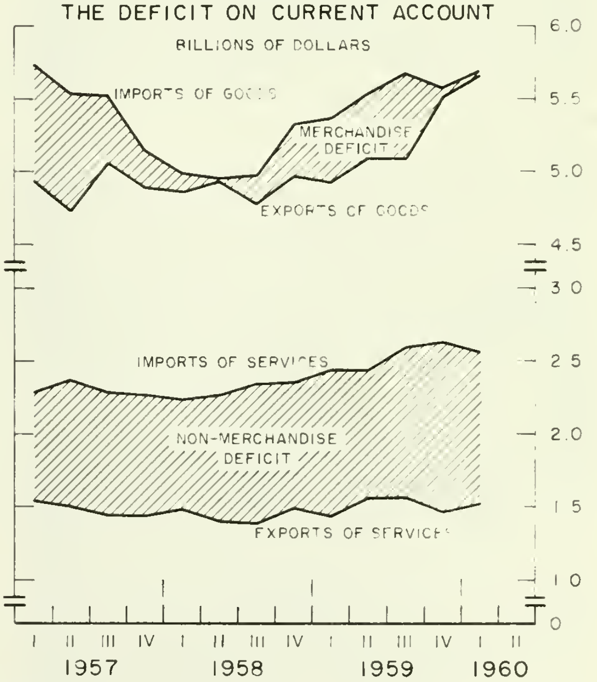
THE SLOW-DOWN WAS ACCOMPANIED BY WEAKNESS IN THE CONSUMER SECTOR, WHERE SPENDING DECLINED IN SPITE OF A SMALL RISE IN DISPOSABLE INCOME DURING THE QUARTER



BUSINESS INVENTORY ACCUMULATION WAS SHARPLY HIGHER, REFLECTING MAINLY THE MOVEMENT OF GOODS INTO RETAIL AND WHOLESALE CHANNELS; BUSINESS OUTLAYS FOR PLANT AND EQUIPMENT DECLINED SLIGHTLY



EXPORTS OF GOODS AND SERVICES CONTINUED TO ADVANCE MODERATELY, BUT THE INCREASE IN IMPORTS WAS SMALL, LEADING TO A FURTHER NARROWING IN THE DEFICIT ON CURRENT ACCOUNT



(IN ALL CHARTS DATA ARE SEASONALLY ADJUSTED AT ANNUAL RATES)

The table below shows percentage changes in some of the main income components from the first quarter of 1959 to the first quarter of 1960, compared with those which occurred in the same period one year earlier.

Changes in Major Income Components

(Seasonally adjusted at annual rates)

Selected personal and business income components	Percent change 1Q 1958 to 1Q 1959	Percent change 1Q 1959 to 1Q 1960
1. National income	8.1	3.8
2. Personal income	6.4	4.2
3. Disposable income	6.4	3.3
4. Wages and salaries	7.6	5.0
5. Corporate profits before taxes	19.7	4.4
6. Net income of non-farm unincorporated business	3.5	-2.1

Production and Employment

The advance in the physical volume of output between the fourth quarter of 1959 and the first quarter of 1960, estimated at slightly less than 1 per cent, on a seasonally adjusted basis, reflected mixed and partly offsetting movements in individual industries. Available information indicates that gains occurred in manufacturing production, public utilities, agriculture, finance, insurance, and real estate, government, and "other" services. Losses were recorded in mining, forestry, construction, and trade. Taken over all, the increase in production in the first quarter is entirely attributable to the goods-producing industries; output in the service-producing industries was, on balance, unchanged. Over the full year, the volume of output in the first quarter of 1960 was running about 4 per cent above the first quarter of 1959.

Manufacturing output in the first quarter of 1960 showed a gain of 1.5 per cent over the fourth quarter of 1959, on a seasonally adjusted basis; however, the level of manufacturing production in March was about 2.5 per cent below the level at the beginning of the year. The increase in durable goods output over the full quarter was somewhat greater than that in the non-durable group. Within durables, much the largest gain was in the transportation equipment industry, which showed an increase of 17 per cent, largely reflecting the resumption of operations in the automotive industry which were interrupted in the fourth quarter when stocks of steel imported from the United States became depleted; production of motor vehicles rose by 35 per cent in the quarter. Production in ship-building was also up, but output in the aircraft and railway rolling stock industries was lower. Changes in the output of other durable goods industries were mixed and more moderate; production was higher in non-ferrous metal products and electrical apparatus and supplies, roughly unchanged in non-metallic mineral products, and lower in iron and steel and wood products.

The non-durable manufacturing industries also showed varying trends in production in the first quarter. Those industries recording gains were textiles, rubber products, chemicals, and products of petroleum and coal; the largest gains, amounting to 8 and 7 per cent respectively, were in the first two of these industries. Declines in production of other non-durable goods were moderate except in the tobacco and tobacco products industry where output fell 7 per cent.

By comparison with the same period a year earlier, manufacturing production in the first quarter was about 5½ per cent higher, with both durables and non-durables showing closely similar gains. All the durable goods industries except non-metallic mineral products and wood products were above a year ago, the largest increases being in non-ferrous metal products (12 per cent), and iron and steel products (9 per cent). Among the non-durable goods industries, clothing, rubber products and leather products were lower by amounts ranging from 1 to 4 per cent; all other industries recorded gains, the largest (15 per cent) being in chemicals.

Output of public utilities continued to make relatively large gains in the first quarter; the increase from the fourth quarter of 1959 was more than 3 per cent and from the same quarter a year earlier about 13½ per cent. The major factor in these gains was the continued expansion in the distribution of natural gas to final users; higher output in electric power utilities also contributed to these changes.

Mining output fell nearly 1 per cent between the fourth quarter of 1959 and the first quarter of 1960, after seasonal adjustment; production was unchanged in metal mining, fractionally lower in fuels, and significantly lower in non-metals and quarrying. There were some striking changes in the composition of the output of metals within an unchanged total; major gains occurred in lead, zinc and copper (up 17, 10 and 8 per cent respectively) and major declines in iron ore and nickel (down 19 and 7 per cent). By comparison with a year earlier, mining output was higher by 7 per cent, with gains in fuels, non-metals and metals, ranging from 5 to 10½ per cent; quarrying output was down 4 per cent.

While output in the forestry industry was down moderately from the fourth quarter of 1959, seasonally adjusted, in the year-over-year comparison the rise in production of 12½ per cent was the largest of any major industry except public utilities. Exports of forest products in the first quarter were running higher than a year ago by 15½ per cent.

The physical volume of activity in the construction industry was down slightly in the first quarter, compared with the preceding quarter, reflecting the slight fall-off in non-residential construction activity.

The volume of output in the trade group in the first quarter was affected by the decline in consumer spending, and showed a slight drop from the fourth quarter of 1959 on a seasonally adjusted basis. Compared with a year earlier, output in trade in the first quarter of 1960 was only slightly above the first quarter of 1959, with all of the gain occurring in the wholesale trade group.

The overall gain in the physical volume of production in the first quarter was accompanied by further increases in employment. The total number of persons with jobs rose 0.4 per cent from the fourth quarter to the first quarter, seasonally adjusted, as did the number with jobs in the non-farm sector. The total number of persons with jobs was higher by 131 thousand than in the same period a year earlier; the number of persons with jobs in the non-farm sector was 158 thousand above a year ago. The gain in total employment of 2.4 per cent over the full year was somewhat smaller than the gain in total production which is estimated to have been about 4 per cent. At the same time, hours of work have declined a little in three of the four industries for which data are available. The number of persons without jobs and seeking work averaged 541 thousand in the first quarter of 1960, compared with 533 thousand in the first quarter of 1959.

Consumer Buying

Personal expenditure on consumer goods and services, seasonally adjusted, declined by 0.6 per cent in the first quarter of 1960 from the level of the preceding quarter. The decline was accompanied by a small drop in the price of consumer goods. In terms of the real volume of consumption, the first quarter decline was only about half of that indicated by the value figures. Compared with one year earlier, consumer spending in the first quarter was about 3 per cent above the first quarter of 1959 in value terms, and about 2 per cent in terms of volume.

The drop in total consumer expenditure in the first quarter was caused entirely by a decline in expenditures for non-durable goods, which were 1½ per cent below the level of the fourth quarter, on a seasonally adjusted basis. Declines were evident in most commodities; the only important exceptions being alcoholic beverages (+4 per cent) and electricity (+3 per cent). Food declined by 1 per cent; tobacco by 1½ per cent; clothing and footwear by almost 3 per cent; gas, oil, and grease and auto parts and accessories both by 5 per cent; and fuel by 1½ per cent. However, there were price declines in many of these commodities, so that the changes in real consumption were less marked. The most notable example of this occurred in food. With a price decline slightly greater than 1 per cent, there was actually a fractional rise in the real volume of food consumption. For all non-durables, the price decline of greater than ½ per cent dampened the drop in real consumption to about 1 per cent.

Expenditures on durable goods were relatively unchanged in the first quarter, on a seasonally adjusted basis. Here again some price declines were evident. For durables as a whole, these price declines averaged almost 1 per cent, so that there was a corresponding increase in real consumption. The largest single durable component, purchases of new and used autos, rose by slightly more than 1 per cent. A decline in expenditures on household appliances and radios reflected a drop in price, and it is estimated that there was a 2 per cent increase in real consumption. Purchases of furniture declined by 2 per cent.

Expenditures on services also showed little change in the first quarter. In contrast to durable and non-durable goods, the prices of services continued their upward trend. Increases in expenditures on personal services, medical care, purchased transportation, and shelter, were almost offset by declines in user-operated transportation, recreation, and net expenditures abroad.

The flow of consumer income has been retarded in recent quarters by a number of factors, among which were the industrial disputes in both Canada and the United States in the last half of 1959, and a structural change in employment which is characterized by a higher proportion of new workers entering the lower wage rate service-producing industries. In addition, hours worked per week have declined in a number of industries in recent quarters. Disposable income remained unchanged between the second and fourth quarters of 1959, and in the first quarter of 1960 was less than 1 per cent above the earlier period. However, the rate of personal saving rose sharply in the first quarter, reflecting the decline in consumer spending and a modest advance in disposable income.

Consumer credit outstanding, including unsecured bank personal loans, rose by 10 per cent between March 31st, 1959 and March 31st, 1960, with the greater part of the increase centred in personal loans from chartered banks which were higher by 15 per cent. As a percent of disposable income, consumer credit outstanding was 11.9 per cent in the first quarter of 1960 compared with 11.1

per cent one year earlier. The data suggest that, after making allowance for seasonal factors, there was little change in consumer credit outstanding from the fourth quarter of 1959 to the first quarter of 1960.

Investment in Business Inventories

Business inventories in the first quarter of 1960 were built up at a seasonally adjusted annual rate of $572 million, a rate of accumulation nearly twice as high as in the closing quarter of 1959. While retail trade accounts for the major part of the increase in the rate of stock-building, there was also a considerably higher rate of accumulation in wholesale trade. Stocks of manufacturers continued to accumulate at about the same rate as in the preceding quarter. Investment in business inventories by broad industrial groups in the two quarters is shown in the following table:

Change in Business Inventories
(Seasonally adjusted at annual rates)

	4th Quarter 1959	1st Quarter 1960
	millions of dollars	
Manufacturing	208	192
Durables	168	8
Non-durables	40	184
Retail trade	40	256
Motor vehicle dealers	-112	100
Other	152	156
Wholesale trade	52	108
Other	- 4	16
Totals	**296**	**572**

The movement of stocks in retail trade was dominated by the changes in inventory in the hands of motor vehicle dealers. Stocks of motor vehicle dealers had been drawn down in the fourth quarter when automotive production was interrupted as a consequence of the United States' steel strike. The resumption of production on a large scale, together with a fairly modest increase in sales, combined to produce heavy inventory accumulation in the first quarter. Retail stocks in other durable lines, considered as a group, continued to accumulate, but at a lower rate than in the fourth quarter; a shift from heavy accumulation to moderate liquidation in the lumber and building materials' trade between the two quarters was the paramount factor in this development.

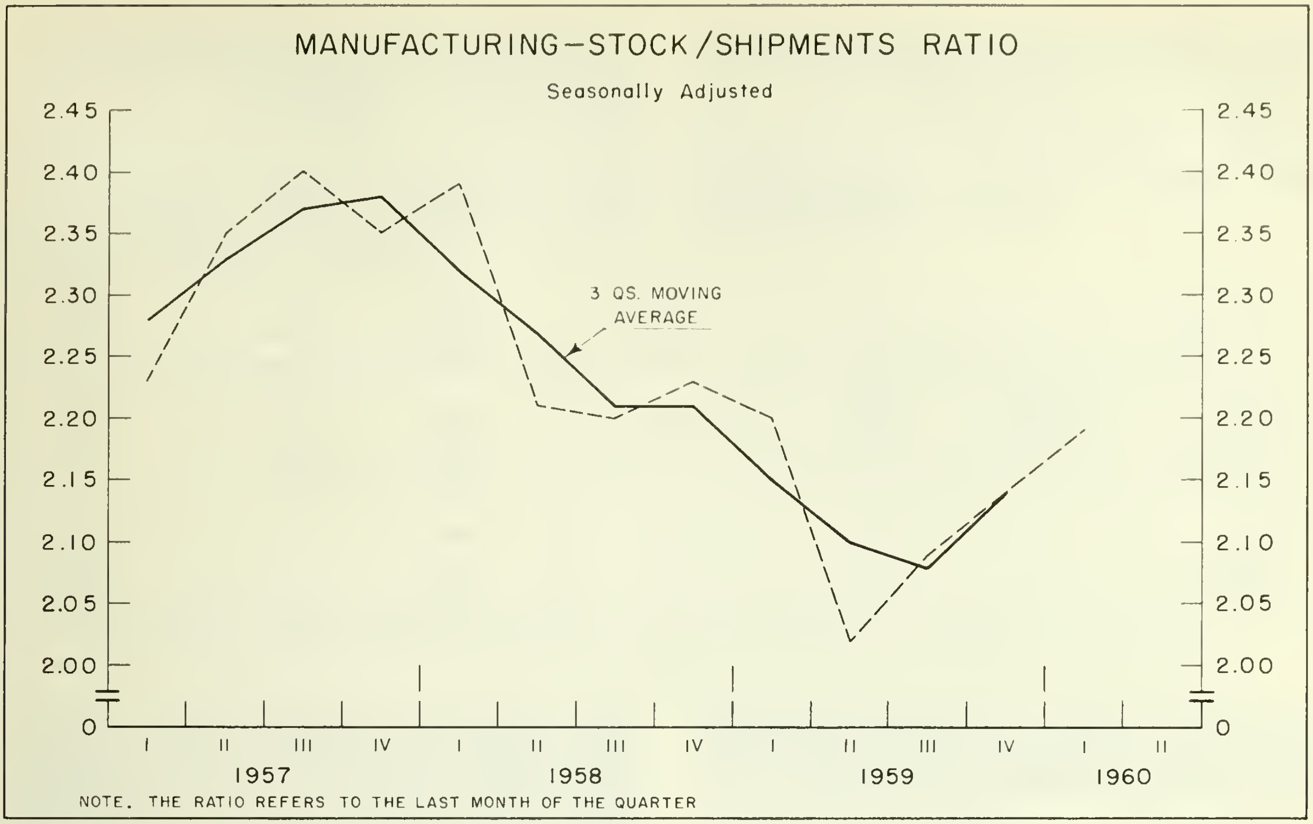
Retail stocks in non-durables' lines accumulated at a considerably higher rate in the quarter. Accumulation was fairly general among the trades, in contrast to the fourth quarter, when stocks remained unchanged in many industries. Inventories in the food group continued to accumulate, though at a lower rate than in the fourth quarter.

Within wholesale trade, the accumulation of stocks was substantial in both durable and non-durable lines. However, liquidation took place in some trades, prominent among them being industrial and commercial equipment and construction and building materials.

The approximately steady rate of stock-building in manufacturing industries in the first quarter reflects strongly opposed developments in durable and non-durable industries. The rate of accumulation fell sharply in the durable industries, reflecting a markedly reduced rate of stock-building in iron and steel, a shift to heavy liquidation in non-ferrous metals and a shift to moderate liquidation in electrical apparatus and supplies and in non-metallic mineral products; in the wood products industry the shift was in the opposite direction, stocks having been drawn down a little in the fourth quarter and built up considerably in the first quarter.

In the non-durable goods-manufacturing group, the rate of stock accumulation in the first quarter was sharply higher, the highest rates of build-up being in food, chemicals and paper industries.

Business inventories have been built up at varying rates, from quarter to quarter, since the beginning of 1959. By the end of the first quarter of 1960, the relationship of stocks to sales differed considerably in some instances from what it had been a year earlier. In retail trade the ratio of stocks to sales was considerably higher than a year earlier, and also above the 1954 and 1957 peaks, on a seasonally adjusted basis. Stocks of automotive dealers in relation to sales were at a post-war high for that time of the year at the end of March. In wholesale trade, on the other hand, stocks were



somewhat lower in relation to sales than a year earlier, and much below the 1954 and 1957 peaks. In manufacturing, the ratio of stocks to shipments was virtually unchanged from a year earlier, but again well below the previous peaks reached in 1953 and 1957. (See Chart).

The relatively low levels of stock/sales (or shipments) ratios in a number of industries during the course of the current expansion have given rise to considerable comment. A number of explanations have been suggested for this, including the possibility that the spread of electronic data processing has led to more effective inventory control, the high rates of interest which have discouraged excessive inventory investment, and the existence of excess capacity which makes it possible to obtain prompt delivery on order. The incentive to accumulate inventories in anticipation of higher prices has also disappeared as prices have been more stable during the recent period.

Exports and Imports of Goods and Services

Exports of goods and services continued to rise in the first quarter of 1960, and at a seasonally adjusted annual rate of $7.2 billion were nearly 3 per cent higher than in the fourth quarter of 1959 when they were at an all-time peak. For the third quarter in succession, imports of goods and services showed very little change. At a seasonally adjusted annual rate of $8.3 billion, they were less than 1 per cent higher than in the fourth quarter.

Merchandise exports were at a rate of $5.7 billion in the first quarter, about 2½ per cent above the level of the preceding quarter. Gains were recorded by almost all the main commodity groups, iron and its products being an important exception. The quarter-to-quarter increases were moderate in most commodity groups except non-ferrous metals. The advance of 12 per cent in exports of non-ferrous metals was the fifth successive quarterly increase for this important export group.

Incomplete detail on commodity imports suggests that the commodity composition of merchandise imports changed considerably between the two quarters. Imports of non-metallic products, agricultural products, wood products, chemicals, and animal products declined, while increases occurred in imports of iron products, and non-ferrous metal products.

On a seasonally adjusted basis, receipts from services rose moderately while payments for services fell moderately between the two quarters. The service series are, however, highly irregular and these movements are not necessarily significant.

The consequence of these divergent movements in total payments and receipts was a further narrowing of the deficit on international current account. The merchandise account came closer into balance, after having fallen to about $70 million in the fourth quarter of 1959 from about $590 million in the third (all data at seasonally adjusted annual rates). The overall deficit fell from about $1.2 billion in the fourth quarter of 1959 to about $1.1 billion in the first quarter of 1960.

The international current account for the first quarter of 1960 is compared with the same period a year ago in the following table:

	1Q'59[1]	1Q'60	Change
	millions of dollars		
Receipts	1,347	1,586	239
Merchandise	1,061	1,284	223
Services	286	302	16
Payments	1,745	1,887	142
Merchandise	1,215	1,330	115
Services	530	557	27
Deficit	398	301	- 97
Merchandise	154	46	-108
Services	244	255	11

[1] Small revisions in the 1959 Balance of Payments data have not yet been incorporated in the National Accounts.

In this comparison, merchandise exports rose about twice as much as merchandise imports and the deficit on merchandise trade fell sharply. The deficit on services continued to increase.

The major gains in merchandise exports in this comparison were in exports of metals and forest products; the increase in exports of steel, copper, nickel and aluminum was particularly large; other important export commodities showing gains were uranium, pulp and paper and lumber. The increase in imports was widely distributed among commodities; automobiles, industrial materials and machinery and equipment showed further increases; petroleum and some agricultural commodities were exceptions to this trend.

Fixed Capital Formation

Total spending on gross fixed capital formation showed a small decline in the first quarter, from a seasonally adjusted annual rate of $7.1 billion in the fourth quarter of 1959, to $7.0 billion, a drop of 1 per cent. The first quarter figure represents a rate only slightly below the $7.1 billion foreseen by businessmen for the year 1960 as a whole in the outlook survey published last February.

The first quarter decline was centred in business outlays for new plant and equipment and was mainly attributable to a fall-off of 3 per cent in machinery and equipment investment. The latter development reflected reduced outlays by the transportation industry for railway rolling stock. Non-residential construction expenditures showed a fractional loss.

The value of housing construction was unchanged in the first quarter from the level of $1,748 million reached in the fourth quarter of 1959. This rate of investment is at present somewhat above the predicted level of $1,677 million for the whole year, although the first quarter decline of 33 per cent in dwelling unit starts (seasonally adjusted) suggests there will likely be a fairly substantial falling off in housing investment in the second quarter. The completion of 157.7 thousand dwelling units in the first quarter (reflecting the high level of starts in the two previous quarters), was responsible for the maintenance of the high value of residential construction put in place during the quarter.

Related statistical information indicates that, after allowing for seasonal factors, there was a drop in shipments of construction materials in the first quarter, and also a drop in new orders received by those industries producing construction goods.

Changes in Income Components

National income, seasonally adjusted, showed only a small rise in the first quarter of 1960, as the rate of increase in labour income slowed, and corporation profits remained unchanged. Net income of non-farm unincorporated business enterprises fell during the quarter, reflecting losses in retail trade; however, there was an increase in net income of farm operators associated with a rise in production of livestock. The flow of interest, dividends and net rental income of persons continued upward.

The small advance in labour income from the fourth quarter of 1959 (seasonally adjusted), reflected the slight fall-off in this component which occurred between January and March. The main contributors to this decline within the quarter were forestry, construction, and transportation; adverse weather conditions affected logging operations in British Columbia and also had an influence on railway operations and construction activity.

Taking the quarter as a whole, the increase of 0.8 per cent in labour income from the fourth quarter of 1959 was concentrated in the service industries; labour income in manufacturing showed virtually no change, and labour income in construction declined. Most of the small first quarter increase appears to be attributable to higher wage rates since employment of paid workers showed little change and hours of work were lower in some industries.

Compared with one year earlier, labour income was higher by 5 per cent in the first quarter of 1960. The service industries continued to record relatively large gains — more than 7 per cent. As is shown in the accompanying Table, a slight reduction in the length of the average work week operated to restrain the expansion of labour income in manufacturing and mining.

	Employment	Hours worked per week	Average hourly earnings	Labour income
	(1)	(2)	(3)	(4)
Manufacturing	0.9%	-0.2%	3.7%	4.2%
Mining	1.9%	-0.3%	2.5%	3.5%

Note: Columns (1) and (4) refer to all paid workers; columns (2) and (3) refer to production workers only.

The relatively unchanged level of corporation profits in the first quarter of 1960 conceals divergent trends in individual industries. Profits declined in mining by 10 per cent, associated with a small drop in output in this industry in the first quarter. Profits in manufacturing declined by 2 per cent, with a moderate fall-off in foods and beverages, and a sharp drop in non-metallic mineral products; the latter may be associated with the decline in output in the construction industry, which is a large consumer of cement and glass products. Profits were also lower in the retail and wholesale trade industries in the first quarter, the decline amounting to 10 per cent for the trade group as a whole.

The declines in these industries were counterbalanced by higher profits in a number of other industrial groups. Gains occurred in public utility operation and in some of the service industries. Within manufacturing, the major gain was in electrical apparatus and supplies. Profits in transportation, storage and communication showed a sharp increase in the quarter.

Seasonally adjusted corporation profits data by industry are now being released on a regular basis in the quarterly D.B.S. series, "Corporation Profits", published by the Business Finance Division of D.B.S. Detail of the changes described above will appear in the first quarter 1960 issue of this publication.

Compared with one year earlier, corporation profits (after dividends paid abroad) in the first quarter of 1960 were higher by about 5 per cent; at $2.9 billion, profits in the first quarter were running at about the same seasonally adjusted annual rate as that reached at the previous peak in mid-1956.

INDUSTRIAL PRODUCTION*

The index of industrial production declined by 2.4 per cent in April, and was at a level about 3.5 per cent below the January figure; all three major sectors of the index contributed to the April decline.

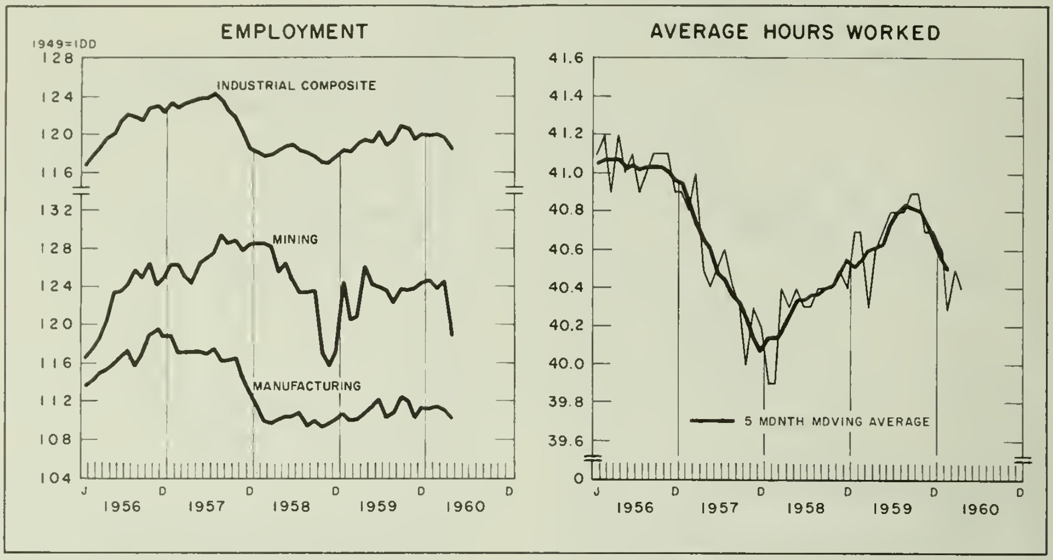
EMPLOYMENT AND HOURS WORKED*

The composite index of industrial employment also fell slightly in April, with employment in mining and manufacturing showing declines.

Average hours worked continued to edge downward, following the general trend of the last few months.



EMPLOYMENT AND HOURS WORKED

Adjusted for Seasonal Variation

		Industrial Composite Employment(2)	Manufacturing(2)			Construction: Building and General Engineering(2)	Mining(2)	Average Hours Worked per Week in Manufacturing(2)

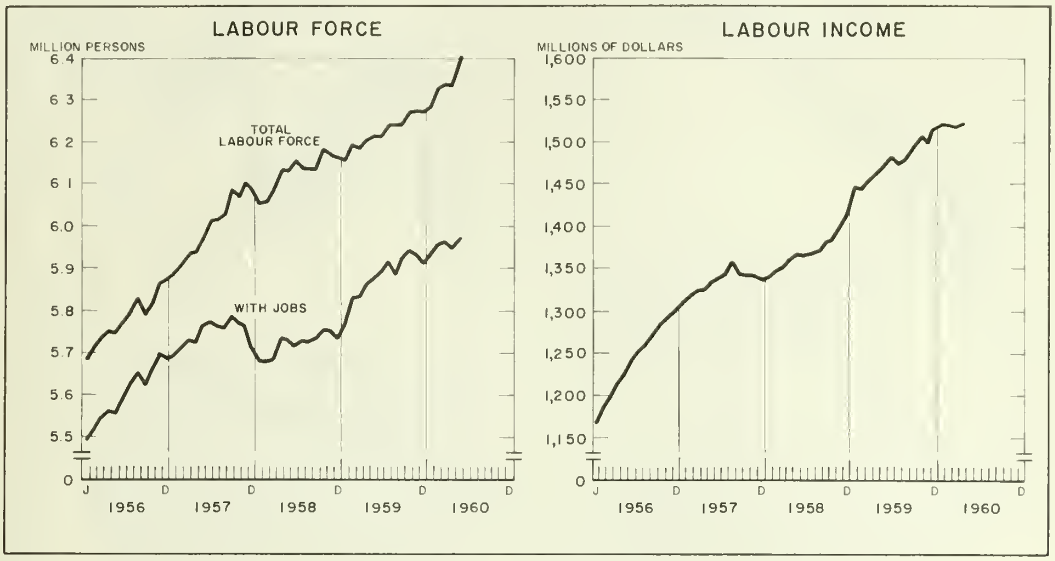
(1) Averages of unadjusted data. (2) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D. or months for cyclical dominance.

LABOUR FORCE AND LABOUR INCOME

The increase in persons with jobs in May was somewhat short of the increase in the total labour force, and the proportion of persons without jobs and seeking work was higher than in the previous month.

Total labour income rose slightly in April.



LABOUR FORCE AND LABOUR INCOME

---

(1)Annual estimates are as of June 1. (2)Seasonally adjusted at annual rates. (3)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4)Rough cords of 128 cu. ft. (5)In urban areas of 5,000 population and over. (6)Average of weekly rates. (7)Revised according to new bench marks. (8)This total includes all generating agencies producing over ten million kilowatt hours per year. (9)End of period. Including personal savings deposits.

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1)Not applicable to figures on population and immigration. (2)Yukon and North-West Territories not included in figures for births, marriages and deaths. (3)Estimates are now published quarterly following Census date, June 1, as well as for January 1 and July 1 of each year. (4)Exclusive of stillbirths. (5)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926–1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

(1)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

(2)Includes adjusting entry.

(3)Includes residual error of estimate.

(4)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

(5)Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see **D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."**

[1]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

(1)Seasonal (formerly supplementary) benefit data included. (2)On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. (3)The number of new cases of recorded unemployment among insured persons. (4)Estimates are based on average weekly number of payments. (5)The number of calendar weeks during which a benefit payment was made. (6)Revised to relate to the Thursday nearest to the last day of the month. (7)Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957–June 1958 which included fishing claimants. **Source: Unemployment Insurance Commission and monthly reports of Unemployment Insurance Branch, D.B.S.**

(1) The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.
(2)The annual and monthly "all industries" totals for 1958 and 1959 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1) These totals include all generating agencies producing over ten million kilowatt hours per year. (2) These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. (3) Less imports. (4) Total net generation less net exports. (5) Mainly the amount used in electric boilers. **Source: Monthly Report, Electric Power Statistics, D.B.S.**

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(1) Shipments for further processing within own firm and for sale in Canada. (2) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1)Includes some silvery pig iron formerly included with ferro-alloys. (2)Excluding shipments for processing. (3)Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. (4)Monthly average. (5)Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

[1] End of period. [2] Does not include apartment-type machines. [3] Electric and other. [4] Gas types are included. [5] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. **Source: Monthly Reports, Domestic Electric Refrigerators, Domestic Washing Machines, Trade of Canada, and Radio and Television Receiving Sets, D.B.S.**

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1958 and 1959 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. (1)Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. **Source: Building Permits, Business Finance Division. D.B.S.**

---

(1)The coverage was extended to 507 municipalities in 1948, and as of 1959 ,stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Planks and boards, flooring and square timber. (3)Hollow blocks including fireproofing and load-bearing tile. (4)For building insulation only. (5)Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6)Includes concrete chimney blocks. (7)Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. (1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 include final payments for all grains. From August, 1958 to July 1959, western wheat prices are initial plus interim payments. Since August 1, 1959, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Livestock and Meat Trade Report, Dept. of Agriculture, Coarse Grains Quarterly, Cold Storage Holdings, and Index Numbers of Farm Prices of Agricultural Products, D.B.S.**

(1)Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. (2) Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. (3)Annual data are monthly averages of crop year. (4)Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1)Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2)Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3)Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4)In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32	June, 1959-36	Sept. 1959-44	Dec. 1959-40

(5)Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. (6)Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1)Does not include re-exports. (2)As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately $2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960. (3)As from January 1958, includes square timber, formerly included with "Other wood and paper." (4)As from January 1958, excludes square timber, now included with "Lumber and timber." (5)Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

(1)As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. (2)Includes pigs, ingots, blooms and billets, casting and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1958 and 1959 differ from the sum of the monthly data due to revisions which cannot be allocated by months.
[2] As of January, 1958, statistics include the British Columbia Electric Railway.
[3] As of January, 1958, the Hudson Bay Railwav has been absorbed into the Canadian National Railway system.

---

(1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)Mainly deposits of foreign banks. (3)Capital, rest fund and undivided profits as at the latest fiscal year-end. (4)Including issues payable in foreign currency. (5)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (6)Excluding Canadian day to day loans. (7)Loans to grain dealers and exporters. (8)Loans to finance purchase of Canada Savings bonds at time of issue. (9)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (10)Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

(1)Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. (2)Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. (3)Less total float, i.e. cheques and other items in transit (net). (4)At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

[1] The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. (2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries. (3) Includes Printing and Publishing and Allied Industries.

NOTE; *Symbols used: Throughout the Review* (..) *means "not available"*; (—) *means "nil" or "less than can be shown with number of digits used"*; (^{p}) *signifies "preliminary" and* (^{r}) *indicates "revised". In some cases the annual data for 1958 and 1959 are provisional.*

DEC 10 1960

Canadian Minerals . . . .

have contributed tremendously to the nation's economic development . . . .

In 1886, when systematic data were first collected, minerals were produced to the value of $10 million . . . .

Now the value exceeds $2 billion a year, and the mining industry employs 145,000 persons, pays $600 million in salaries and wages and upwards of $900 million for materials and supplies. Minerals are a major contributor to Canada's export trade.

The **Dominion Bureau of Statistics** keeps close tab on the developments in this field and publishes 9 monthly and 20 annual reports on the full range of Canadian minerals. The monthlies provide current production and other data, while the annuals contain detailed statistics on products shipped, employment, salaries and wages, materials and supplies used and other information.

Monthly Reports are issued separately on—

- Gold
- Silver, Lead and Zinc
- Copper and Nickel
- Asbestos
- Iron Ore
- Salt
- Coal
- Crude Petroleum and Natural Gas
- Leading Minerals

Annual Reports range in coverage from **Asbestos** to **Zinc**. **A special report contains a chronological record of Canadian mining events** from 1604.

A list of DBS publications on Mining and other aspects of the Canadian economy is contained in the **Catalogue of Current Publications 1959.** ***Write for a free copy to: Information Services Division, Dominion Bureau of Statistics.***
